| CRITERIA | DESIGN | CAA REQUIREMENT | OPERATOR REQUIREMENT |
|-------------|---|---|----------------------|
| FATO | K-Max Copter length = 16m x 1.5 = 24m | The dimensions of a FATO should be of sufficient size and shape to contain an area within which can be drawn as a circle of diameter not less than 1.5 times the over-all length or width, whichever is the greater, of the longest or widest helicopter the heliport is intended to serve. (For this pad approx. 19000m) | TBC |
| SAFTEY ZONE | TBC | The safety area should extend outwards from the periphery of the FATO for a distance of at least 3000 mm or 0.25 times the over-all length, of the longest or widest helicopter | TBC |
| HATCH ENTRY | No Hatch on Stairway (Meets CAA Requirements) | Stairways should be constructed of non-combustible materials and may not be covered by hatches. | TBC |
| SAFTEY NET | 1500mm safety net protruding from Helipad | A safety net should be placed on the perimeter of the platform at the places where it is not possible to install a guard rail which would otherwise infringe clear area requirements. The Net should have a width of at least 1500mm. | TBC |
