Comment:

We share a boundary on the seaward side of the DOC land; we've noted a lot of activity in the mining area. The water for the farm (600-700 cattle) and 3 houses comes from a fenced off spring near the back boundary with D.O.C. The spring has good flow throughout the year, "100% pure"

Following hearing an interview on the radio stating

- vents to the tunnels will be up to 200mtrs deep
- the intention is to return the processed rock to the retired tunnels

And following some limited reading that left me with the understanding springs may be diverted, I made attempts to contact O.G. NZ Ltd but wasn't successful.

Yes we would like to see relevant information please but as none of us are geologists and not confident to make our own judgements can we discuss remedy should our water
