Attachment 10

Current RMA applications for resource consents

Current RMA Applications for Resource Consents

Resource Management Act 1991 (RMA) applications are in process (currently on hold with timeframes having been extended under s37) that are substantially the same as the Project seeking the FTAA referral approval. These applications are with the Canterbury Regional Council and the Waimakariri District Council. The Applicant for the Council applications is Protranz International Limited.

Protranz International Limited is owned by the same owner of Whiterock Lime Limited (the FTAA referral approval Applicant and Project site landowner).

The details of the current applications with the relevant authorities are provided below:

To Canterbury Regional Council:

Application Reference Number / Type of Consent		RMA Section	Activity	Duration Sought
CRC243699	Land use Consent	s9(2)	Vegetation clearance and earthworks in river riparian areas for any defence against flood water improvements and pipelines for outfalls.	10 years
CRC243700	Land use Consent	s9(2)	Excavation where <1m to groundwater and within 50 m of a surface water body, and deposit of material including managed fill landfill waste over an aquifer.	Unlimited (refer s123 (b) of the RMA).
CRC243701	Land use Consent	s13(2)	The removal of a ford crossing structure, and outfall pipe construction in the bed of rivers.	10 years
CRC243702	Water Permit	s14(3)	Temporary take and use of groundwater for site dewatering to install a landfill underdrainage system.	10 years
CRC243703	Water Permit	s14(3)	Non-consumptive take and use of groundwater (<5L/s and 100 m^3 per day) via a landfill underdrainage system to maintain groundwater level separation from the landfill liner. 3 Options for discharge referred to below.	35 years
CRC243704	Discharge Permit	s15(1)	Discharge of site dewatering water associated with the installation of a landfill underdrainage system. Discharge of sediment and sediment laden water onto land and/or into surface water associated with vegetation clearance and earthworks in riparian margins and installation and removal of structures in the bed and banks of rivers. Discharge of water treatment chemicals to reduce suspended solids.	15 years
CRC243705	Discharge Permit	s15(1)	Discharge of stormwaters onto land and into surface water associated with the development of a managed fill landfill.	35 years

Application Reference Number / Type of Consent		RMA Section	Activity	Duration Sought
			Discharge of water treatment chemicals to reduce suspended solids. Discharge of solid and hazardous waste to land, being associated with a managed fill landfill, and unintended landfill liner leakage leachate onto and into land. Discharge of groundwater (from the landfill underdrainage system) and potential liner leakage leachate either; onto land that may enter surface water (Option 1) or onto land that may enter water (Option 2), or back into groundwater (Option 3).	
CRC243706	Discharge Permit	s15(1)	Discharge of contaminants to air from the development and operation of a quarry and managed fill landfill, including the handling, processing and storage of bulk solid materials.	35 years

To the Waimakariri District Council

A land use consent pursuant to s9(3), reference number RC245076, for the following activities:

- Earthworks and clearance within waterway margins (Operative Plan)
- General earthworks for formation of a landfill (Operative Plan)
- Bridge structure within a waterway setback (Operative Plan)
- Increased rates of mineral extraction (Operative Plan)
- Operate a managed fill landfill (Operative Plan)
- Construction of outfalls within a Sites and Areas of Significance to Māori (Proposed Plan)
- Earthworks and stockpiling associated with quarrying / landfill construction (Proposed Plan)
