

APPLICANT RESPONSE TO OTHER PARTIES COMMENTS ON CONDITIONS

The table below sets out the changes to the draft conditions that the applicant proposes having reviewed the comments from other parties.

KEY:

- **Red underline** are additions from other parties that OGNZL agrees with;
- **Red strike through** are deletions from other parties that OGNZL agrees with; and
- **Red bold** are additions from parties that OGNZL agrees to, with additional OGNZL amendments.

Table Reference	Parent Document Reference	Condition Number	Other Parties Comments Summary	OGNZL Comment (wording agreement / disagreement and reasoning)	Proposed Condition Amendment (if any)
COMBINED HDC AND WRC RESOURCE CONSENT CONDITIONS					
<i>Department of Conservation (“DOC”) Comments</i>					
1.	Appendix B1 / Comments A6, A7 & A8	C47A	Minor amendments sought to align with the Panel’s approach on conditions elsewhere.	OGNZL agrees with these proposed minor amendments.	<p>[...]</p> <p>ii. Terrestrial Ecological Management Plan – which seeks to provides an approach for managing and monitoring fauna values associated with site clearance as part of mining activities;</p> <p>iii. Vegetation Remediation Plan – which seeks to guides impacts management for vegetation clearance above ground within the Coromandel Forrest Park;</p> <p>iv. Management of Plant Pathogens and Invasive Species – which seeks to outlines the methods and protocols to be implemented to minimise risk of plant pathogens and weeds;</p> <p>[...]</p>

Hauraki District Council ("HDC") Comments					
2.	-	C4B.b	Amend the condition to reflect the process for management and monitoring plan amendments to occur, including parties to engage.	OGNZL agrees with the proposed amendment.	<p>[...]</p> <p>b. The Consent Holder must address any written response provided by the Consent Authority and resubmit an amended monitoring plan, management plan or any other document to the Consent Authority for certification.</p> <p>Prior to amending either, the Coromandel Forest Park Kauri Dieback Management Plan or the Wharekirauponga Pest Animal Management Plan the consent holder must follow the requirements of Condition C5AA.</p>
Waikato Regional Council Comments					
3.	-	C2	Seeks that reference to the application documents as identified within Waikato Regional Council's database is included in the condition to aid in ongoing monitoring.	OGNZL agrees with the proposed amendment as sought, given the role of the Waikato Regional Council in monitoring the site (and enforcing consent conditions) for the duration of the regional resource consents.	<p>The activities authorised by this consent must be undertaken in general accordance with the information contained in the Assessment of Environmental Effects and supporting technical documents submitted by OceanaGold New Zealand Limited ("the Consent Holder") to the Environmental Protection Authority ("EPA") in support of its application for authorisation of the Waihi North Project under the Fast-track Approvals Act 2024 ("Act"). For those activities relevant to the Waikato Regional Council's functions then the application documents are those recorded on the Waikato Regional Councils database titled "Waihi North Application Documents Parts A-D and Parts F-J - EPA" and recorded as document number 34044972 on the Waikato Regional Council database.</p>

HAURAKI DISTRICT COUNCIL LAND USE CONSENT CONDITIONS					
<i>DOC Comments</i>					
4.	Appendix B2 / Comments A7	115	The site selection protocol in Attachment 6 and its attachment (Appendix A) refer to a number of conditions both in the HDC conditions and DOC approvals. It does not appear that these references have been updated to align with the Panel's draft conditions.	This has already been addressed with updates made to Attachment 7, provided with the applicant's comments on conditions on 4 December 2025.	No changes proposed.
5.	Appendix B2 / Comment A8	115	Removal of drill site reference with regard to the northern area concession.	OGNZL is agreeable to the deletion as there are no drill sites in the northern area concession. Note that OGNZL has proposed an update the advice note to reflect the Panel's approach to certification.	[...] iv. Submit the Siting Report to Hauraki District Council for written certification under Condition C5 of Schedule One for their information that the Waihi North Project Site Selection Protocol has been appropriately applied. Advice Note: The same Siting Report will be submitted to the Department of Conservation for written their information certification under the requirements of the Waihi North Project - Wharekirauponga Access Arrangement and the Waihi North Project - Northern Area Concession .

Table Reference	Parent Document Reference	Condition Number	Other Parties Comments Summary	OGNZL Comment (wording agreement / disagreement and reasoning)	Proposed Condition Amendment (if any)
6.	Appendix B2 / Comment A21	137	Fencing around the wider survey site and drill site following surveying.	OGNZL does not oppose the amendments as they are aligned with current practice, however if the panel chooses to include DOC's suggestions, it should be clarified that only one further night of survey is required if fences are not erected within 5 days as the DOC comments could be interpreted as requiring three additional nights.	The Consent Holder must erect a frog / lizard exclusion fence around the perimeter of any Drill Site in Area 1 within 5 days following the final survey or native species translocation (whichever is the latter). Exclusion fences must be inspected periodically and maintained so as to ensure their integrity. If the exclusion fence is not erected within 5 days following the final survey or native species translocation, then the Drill Site must be re-surveyed over one night for frogs and lizards.
7.	Appendix B2 / Comment A22	139	Amendments to this condition to reflect consistent terminology and to require frog / lizard surveys in appropriate climatic conditions.	OGNZL agrees with the additions.	Prior to undertaking vegetation clearance removal at any proposed vent shaft / pump test site, the Consent Holder must ensure that that an ecological survey is undertaken by one or more suitably qualified ecologist(s) (including a suitably qualified herpetologist). The survey(s) must be undertaken over the area of the proposed site, plus a 10 m wide buffer surrounding the site. Surveys for frogs and lizards must be undertaken in suitable climatic conditions as defined by Condition 154. Advice Note: The purpose of the survey(s) undertaken is to provide a description of the wildlife and vegetation present, including all species of flora and fauna present and the number, size (height and diameter at breast height) and estimated age of mature canopy and emergent trees.
8.	Appendix B2 / Comment A24	140A	New condition to mirror condition 119A, but for vent shaft / pump test sites.	OGNZL agrees with the additions.	If a frog nest, or a frog brooding eggs or froglets (i.e. small, tailed frogs) is observed during ecological surveys, or during

Table Reference	Parent Document Reference	Condition Number	Other Parties Comments Summary	OGNZL Comment (wording agreement / disagreement and reasoning)	Proposed Condition Amendment (if any)
					<p>vegetation clearance, all activities at that site will cease and an alternative site(s) will be selected.</p>
9.	Appendix B2 / Comment A27	147	Additional exclusion fencing requirements.	<ul style="list-style-type: none"> > 147.1. OGNZL is not opposed to this condition as it is consistent with current practice, however if the panel chooses to include the amendments, it should be clarified that only one further night of survey would be required if fences are not erected within 5 days. > 147.2. This final fence inspection is new and is not considered necessary. Maintaining the integrity of the fence and resurveying if it is damaged is current practice. If it was damaged, one further night of survey would be required. > 147.3. OGNZL is agreeable to this condition as it consistent with current practice. 	<p>1. The Consent Holder must erect a frog / lizard exclusion fence around the perimeter of any Vent Shaft / Pump Test Site in Area 1 within 5 days following the final survey or native species translocation (whichever is the latter). Exclusion fences must be inspected periodically and maintained so as to ensure their integrity. If the exclusion fence is not erected within 5 days following the final survey or native species translocation, then the Vent Shaft / Pump Test Site must be re-surveyed over one night for frogs and lizards.</p> <p>2. Once constructed, the integrity of exclusion fences will must be maintained at all times and a final fence inspection will must be completed by the Consent Holder no earlier than 2 days before site works commence. If the integrity of the exclusion fence is not continuously maintained, the fence will must be repaired, and the site will must be resurveyed for frogs for an additional night (as outlined in Condition 139).</p> <p>3. Sites with exclusion fences in place for more than 6 months will must also be resurveyed for frogs for an additional night (under environmental conditions outlined in Condition 154) to determine if any remove any doubt that frogs have accessed the site during this period. 1.</p> <p>4. If any resurvey occurs when climatic conditions do not maximise the chance for native frog emergence, the Consent Holder will must seek advice from the Hauraki District Council and the Department of Conservation on how to proceed, this may include delaying works until surveys can be completed in suitable conditions.</p>

Table Reference	Parent Document Reference	Condition Number	Other Parties Comments Summary	OGNZL Comment (wording agreement / disagreement and reasoning)	Proposed Condition Amendment (if any)
10.	Appendix B2 / Comment A29 and A30	148	<ul style="list-style-type: none"> > Removal of drill sites as it is covered by proposed condition 126B. > Removal of clause 2 as the condition is not relevant to drill sites. 	OGNZL agrees with the additions.	<p>Any <i>Pterostylis puberula</i>, <i>Pterostylis tasmanica</i> or king fern <i>Ptisana salicina</i> individuals found when establishing any Drill Site; Vent Shaft / Pump Test Site in Area 1 must be translocated to a suitable alternative site containing similar light, soil and vegetation community characteristics as determined by a suitably qualified and experienced ecologist. The Hauraki District Council and Department of Conservation must be notified of GPS information and/or NZTM coordinates of the transfer location within 20 working days of the transfer having occurred.</p> <p>Disturbance of <i>Pterostylis puberula</i>, <i>Pterostylis tasmanica</i> or king fern <i>Ptisana salicina</i> must be avoided when establishing any Portable Rig Site</p>
11.	Appendix B2 / Comment A31	152	Amendments for clarity.	OGNZL agrees with the additions, given they are administrative in nature (OGNZL does not agree with any amendments that increase the buffer from 3 m to 6 m as sought by DOC).	<p>Prior to undertaking vegetation removal at any Portable Rig Site or Water Pump Site, the Consent Holder must ensure that that an ecological survey is undertaken by one or more suitably qualified ecologist(s) (including a suitably qualified herpetologist). The survey(s) must be undertaken over both the core 8 x 3 m site (i.e., 24 m²), with a 5 m buffer applied to it, giving a total survey area of 13 x 18 (234 m²) 18 m x 13 m plot(s) centred on the approximately 8 m x 3 m site(s) in accordance with Condition 1156.</p>
12.	Appendix B2 / Comment A32	156A	The condition has been recommended to mirror Condition 119A but for Portable Rig Sites / Water Pump Site(s).	OGNZL agrees with the additions, given they mirror conditions for other types of drill sites.	If a frog nest, or a frog brooding eggs or froglets (i.e. small, tailed frogs) is observed during ecological surveys, or during vegetation clearance, all activities at that site will cease and an alternative site(s) will be selected.
13.	Comment A33	157	Amended so the condition is consistent with the exclusions	OGNZL agrees with the additions (noting OGNZL does not agree with the	If five or more 'At Risk' or 'Threatened' frogs or lizards are found during any ecological survey(s), or one or more

Table Reference	Parent Document Reference	Condition Number	Other Parties Comments Summary	OGNZL Comment (wording agreement / disagreement and reasoning)	Proposed Condition Amendment (if any)
			requirements for northern striped geckos (i.e. an alternative area must be found if one or more striped geckos are recorded).	change further in the condition changing the buffer area from 3 m to 6 m).	northern striped gecko (Toropuku "Coromandel") is found during any ecological survey(s), then the Consent Holder shall must determine if there is an alternative 8 m X 3 m area within the ecological survey area(s) that is suitable for use as a site (i.e. a 8 m X 3 m area where four or less frogs, lizards, or <u>no</u> northern striped gecko have been found, and where the boundaries of that 8 m X 3 m area have applied a 3 m buffer from any frog, lizard, or northern striped gecko that has been found within the ecological survey area(s)). If no such alternative 8 m X 3 m area is available, an alternative site must be selected.
