Purpose

The purpose of this document is to compile the Museum's records about specific kōiwi. These kōiwi were repatriated in 2001 and reburied on Taupiri.

This information is being compiled following an enquiry as to the location where the kōiwi were found, and what information the Museum holds on this.

Background

On 3 November 2001 Auckland Museum repatriated kõiwi to Ngāti Naho, Tainui. The repatriation included a handover in the Museum foyer at 4am, ahead of travel and reinterment of the kõiwi at Taupiri. Auckland Museum's Tumuaki Director Māori, Paul Tapsell, with the Taumata-ā-lwi, and Ngāti Whātua o Ōrākei kaumatua Dr Takutai Wikiriwhi, accompanied Ngāti Naho to Taupiri then to Waahi Pa (Huntly).

The repatriation was prompted by the building of Springhill Prison. Newspaper articles from the time, held on file at the Museum (and shared in this document), explain residents opposed to its construction learnt the Museum had these kōiwi through researching the area, which ultimately led to their repatriation.

Details of the kōiwi and their donation are below. Transcripts and copies of the Museum's catalogue records follow. Catalogue records provide a map reference for where the kōiwi were found and this is also discussed.

Museum records

Along with an overview of the donation, a chart is given summarising the various Museum catalogue records about the kōiwi. The chart gives all of the catalogue numbers for these tūpuna. As a way to track the collection, catalogue numbers have usually been given to everything in the Museum's collection, including human remains. These numbers usually include an accession number and/or a number assigned by the Museum department that held them – the Ethnology department in the cases of the kōiwi in this report. These kōiwi also have an ID for their records on the Museum's collection management database, Vernon, and a Human Remains Database ID number. Images of originals of the catalogue information and other records (donation acknowledgement letter and 2001 report), copied in chronological order, follow the chart.

<u>Overview</u>

In 1972 kōiwi from Te Kauwhata were donated to the Museum by Mr R Millen of Te Kauwhata. In 1980 he donated another skull from the same location. Museum records indicate they are the remains of multiple individuals. The location they came from is recorded as Te Kauwhata, "in rock shelter 30ft above swamp" with a map grid reference. More regarding the location is shared on pages 13-14.

The first dated record the Museum has for these kōiwi is their entry in the Accession Register on 10 February 1972. They were given the accession number 1972.16 (which is also written by the Museum as 16/72). In this entry the donor's name is incorrectly recorded as Mr R Miller. This mistake was repeated in a letter sent to the donor on 14 February 1972 acknowledging the donation. The

kōiwi were registered into the Ethnology department and given the Ethnology number 45267. They have both an Ethnology Register entry and an Ethnology catalogue card. These Ethnology records correctly name the donor as Mr R Millen, which has been verified through electoral rolls and information from the 2001 repatriation.

The Ethnology catalogue card also notes that on 1 July 1980 the donor brought another skull to the Museum. This tupuna was given the Ethnology number 45267.1.

These kōiwi also have entries in the Human Remains Store Shelf List. This list was initially written in 1992 with additions in 1995. The list details the kōiwi in each box in the Museum's wāhi tapu at those dates. It is possible to identify when entries were made due to handwriting. The entries for these kōiwi are from both 1992 and 1995 – some have entries exclusively written in 1995 and others entries written in 1992 with more information added in 1995. When that list was written, and at the time of their repatriation, they were kept in 6 boxes. The Human Remains Store Shelf List mentions there were "up to 7 individuals in all" however the descriptions can also be read to describe up to 11 tūpuna and it is not now possible to check the precise number.

In 2001, ahead of the repatriation, the Curator of Archaeology Nigel Prickett prepared a report summarising information about the donation and details of the tūpuna taken from the Human Remains Store Shelf List. This report was mentioned in one of the newspaper articles the Museum has on file and is reproduced on pages 11-12.

Summary chart

Catalogue numbers:

45267 – Ethnology number (kōiwi donated 1972)

45267.1 – Ethnology number (kōiwi donated 1980)

1972.16 – Accession number (also written as 16/72)

524, 525, 526, 527, 528, 529 - Human Remains Database IDs

46803 - Vernon Database ID

Catalogue entries:

Accession Register: "16/72. 10-2-72. Skulls and other human bones. Loc: Te Kauwhata (ack 14/2) Pres: Mr R. Miller, Great South Road, R.D.2., Te Kauwhata."

Ethnology Catalogue Card: "45267. 16/72. Skulls and other human bones. Te Kauwhata Map 52 Grid ref 592980. Mr R. Millen, Great South Rd. Te Kauwhata. In rock shelter 30 ft above swamp. 1 July 1980 the remaining skull from this material was brought in by Mr Millen & registered as 45267.1"

¹ The list was written by student volunteers Miriam Young followed by Hallie Buckley.

Human Remains Store Shelf List, 1992 and 1995:

NB: the entries have been copied here in the following order: kōiwi numbered 45267 based on sequential box number, followed by kōiwi numbered 45267.1. This is not the order in which they appear in the original list.

In some cases additional information added in 1995 appears elsewhere in the book from the original entry. For sharing here, that additional information is grouped with the original so all details of kōiwi in a box are shared together.

45267, box 1: " 45267 (Box 1 of 5). Te Kauwhata. Map 52 Grid Ref 592980 rock shelter 30ft above swamp. [Shelf]31 - Box 2-5 Shelf 8. Repr. multiple burial.

At least 2 individuals represented in this box.

Individual I: (sh 8 B1[Shelf 8, Box 1?]) - 1 x femur, 1 x humerus, under 5 yrs (2-3 yrs). 1 x scapula, 2 x ribs, 1 x zygoma, Atlas, 1 x tooth.

- -2 x femur (adult) could be with any of the Te Kauwhata individuals up to 7 individuals in all.
- -1 x femur if this is human it belongs to an infant.
- Bag of miscellaneous, poorly preserved bone fragments.
- 2 x rat tibia/fibula
- block of soil containing unstable long bone material."

45267, box 2: "Shelf 8. 45267 (Box 2 of 5) Te Kauwhata. Suture: degree 3. Incomplete skull - highly weathered, unstable - probably female (?)."

45267, box 3: "Shelf 8. 45267 (Box 3 of 5). Te Kauwhata. 2 individuals. Skull and fragments of mandible. Cranium and mandible 1 - almost certainly female.

Individual 1: - repres by cranium x 2 mandible fragments.

- Satures are all nearly completely closed.
- Maxillae: Highly eroded post-mortem but is evidence of large abcess in right quad probably of M1.
- The 2 central incisors have been lost with some resorption left quad M1 lost with resorption.
- Mandible: left quad PM2 lost to abcess with resorption.

Individual 2: - repres by 3 mandiblular frags.

Material is highly weathered yet general thinness of the bone, with long ramus angle and evidence of molar loss (particularly right side) with complete resorption of alveolar
& thinning of general matrix, all this suggests an individual of advanced age - post 40
years."

45267, box 4: "Shelf 8. 45267 (Box 4 of 5). Te Kauwhata. Suture: degree 0. 1 M2 present - no wear. Skull only. 12-18 yrs (?). Probably female (juvenile?). Highly weathered, facial bones missing."

45267, box 5: "Shelf 8. 45267 (Box 5 of 5). Te Kauwhata. At least 4 individuals repres. Fragments of skull - 1 child - repres by 3 thin warped parietal fragments (see back [?]). *the placing with individuals is tentative but is based on colour of material & logics.

Indiv 1 Child: repres by parietal frags & M1 crown & incisor crown.

Indiv 2: Adult - 1 large fused fragment consisting of frontal (partial - right orbit missing).

- Left parietal x right parietal fragmented.
- L x R temporal minus squamosal portions.
- 1 occipital with occipital ridge to lambdoidal suture.
- 1 right inferior and posterior parietal fragment with squamosal suture & section of lambdoidal.
- 2 partial maxilla.
- 1 sphendoidal fragment.

Individual 3: 1 large left parietal fragment with squamosal, lambdoidal x sagitals suture portions. Individual 4: 1 occipital fragment with full nuccal lines (interior) & occipital ridge on exterior - lambdoidal suture (greater portion of it, at superior border). 1 temporal (left) minus petrous & squamosal portions.

- This material is grey white with mossy material on it, whereas the other bone fragments are ranging from orangey brown to dark brown.
- Miscellaneous fragments: 8 parietal frags, 2 molar (zygomatic) frags, 5 occipital.
- Individuals these belong to: ??"

45267.1: "Shelf 8. 45267.1. Te Kauwhata. Suture: degree 3 (obscured). Right M3 just erupting. Skull and mandible – Mandible Wear M2 mod-high. Anterior dentition wear is high - alveolar erosion.

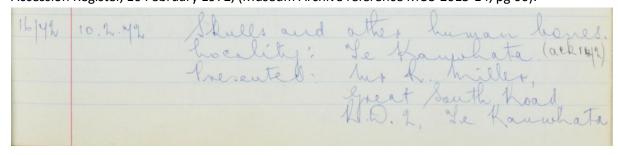

Maxillae: Left, abcess at root of M1.

Right - M1 about to go. M2 wear moderate.

Almost certainly male - c 25 yrs old (prob older)."

Report by Nigel Prickett, 2001

Halls Road, Te Kauwhata, human remains

Notes on human remains from a rock-shelter 30 ft above a swamp, near Halls Road, Te Kauwhata, which came into the museum in 1972 from Mr R Millen, Great South Road, Te Kauwhata. In 1980 Mr Millen brought in a skull and mandible from the same place (item 6 below). The material was found at grid reference 592980, map N52 'Te Kauwhata'.

Auckland Museum catalogue number 45267

The remains are held in six boxes. The following typed notes are copied from handwritten record made about 10 years ago for the museum by a student of anatomy.

1 At least two individuals represented in this box.

Individual under 5 years (2-3 years): 1 femur; 1 humerus; 1 scapula; 2 ribs; 1 zygoma, atlas, 1 tooth

2 femurs (adult) - could be with any of the Te Kauwhata individuals - up to 7 individuals in all.

1 femur - if this is human it belongs to an infant.

Bag of miscellaneous, poorly preserved bone fragments.

Block of soil containing unstable long bone material.

- Incomplete skull highly weathered, unstable probably female (?)
- 3. Individual 1. Represented by cranium and 2 mandible fragments.

Sutures are all nearly completely closed.

Maxillae: highly eroded post-mortem - but there is evidence of a large abscess in right quad, probably of M1.

The 2 central incisors have been lost - with some resorbtion - left quad M1 lost with resorbtion

Mandible left quad PM2 lost to abcess with resorbtion.

Individual 2. Represented by 3 mandibular fragments.

Material is highly weathered yet general thinness of the bone, with long ramus angle – and evidence of molar loss (particularly right side), with complete resorbtion of alveolar and thinning of general matrix, all this suggests an individual of advanced age – post 40 years.

- Skull only: 12-18 years(?) probably female. Highly weathered. Facial bones missing.
- (The placing with individuals is tentative but is based on colour of materials and logic)

<u>Individual 1 Child.</u> Represented by parietal fringe and M1 crown and incisor crown. <u>Individual 2 Adult</u> – 1 large fused fragment consisting of frontal (partial – right orbit missing).

Left parietal and right parietal - fragmented

Left and right temporal - minus squamosal portions

1 occipital - with occipital ridge - to lambdoidal suture.

1 right inferior and posterior parietal fragment with squamosal suture and section of lambdoidal.

1 sphenoidal fragment.

<u>Individual 3.</u> 1 large parietal fragment with squamosal, lambdoidal and sagittal suture portions.

<u>Individual 4.</u> 1 occipital fragment with full nuchal (lines?) (interior) and occipital ridge on exterior – lambdoidal suture (greater portion of it at superior border).

1 temporal (left): minus portion and squamosal portion

This material is grey-white - with messy materials on it, whereas the other bone fragments are ranging from orangey brown to dark brown.

Miscellaneous fragments: 8 parietal fragments; 2 molar (zygomatic) fragments; 5 occipital fragments.

Skull and mandible.

Maxillae: left - abscess at root of M1. Right - M1 about to go. M2 wear moderate. Right M3 just erupting. Almost certainly male - c. 25 years old (probably older).

Nigel Prickett Curator of Archaeology

24 October 2001

Location

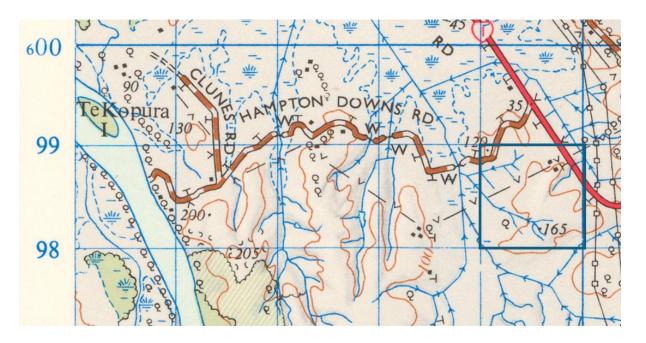

The location where the kōiwi were found is given in Museum records as Te Kauwhata along with a map grid reference and the extra detail "in rock shelter 30ft above swamp." The map reference provided is "Map 52 Grid ref. 592 980."

A copy of this map with marked location is not with the files. However, in the New Zealand Mapping Service map series map N52 is Te Kauwhata. There are N52 Te Kauwhata maps for 1942, 1961, 1967 and 1981, which are available online through Auckland University's Geospatial Data Repository, here: https://geodatahub.library.auckland.ac.nz/gdr/#maps-nzms.²

Given the dates of donation (1972 and 1980), it is possible that the 1967 map was referred to, though the 1961, 1967 and 1981 maps would appear to identify the same spot using the reference 592 980.

The 1967 N52 Te Kauwhata map uses 4 digit grid references rather than 6 digit ones (such as 592 980) so it is necessary to find the 4 digit reference square (in this case 59 98), then divide it into 100 to find the 6 digit reference spot.

This image shows a selected area of the 1967 map with the 4 digit grid reference square 59 98 highlighted. Other squares are shown for geographical context:

² 1942:

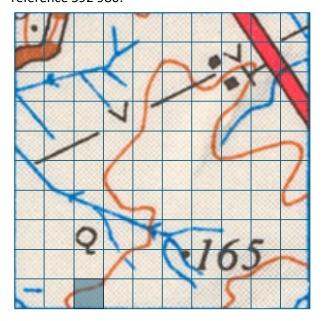

https://geodatahub.library.auckland.ac.nz/public/maps/LINZ/NZMS/NZMS 001/jpg/NZMS001 N52 1942.jpg 1961:

https://geodatahub.library.auckland.ac.nz/public/maps/LINZ/NZMS/NZMS 001/jpg/NZMS001 N52 1961.jpg 1967:

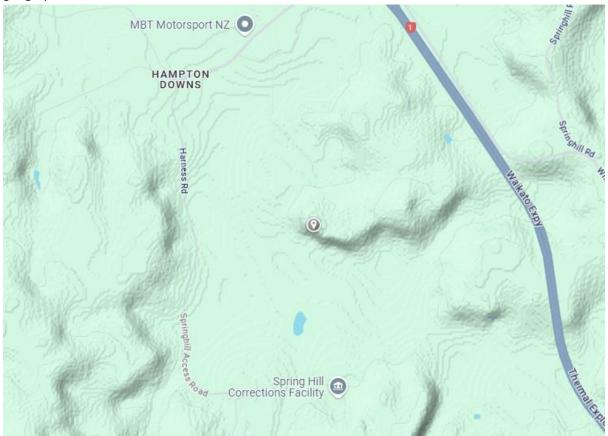

https://geodatahub.library.auckland.ac.nz/public/maps/LINZ/NZMS/NZMS_001/jpg/NZMS001_N52_1967.jpg 1981:

https://geodatahub.library.auckland.ac.nz/public/maps/LINZ/NZMS/NZMS 001/jpg/NZMS001 N52 1981.jpg

The below image shows that square divided into 100 squares. The highlighted square is grid reference 592 980:

An estimation of how this translates to Google maps is shown by the small grey location pinpoint in the image below. Please note this is an imperfect placement approximated by looking at surrounding geographical features:

Please also note this site is not registered on Archsite, the national database of recorded archaeological sites in Aotearoa.

Bones on site 'unlikely'

By DANIEL ADAMS

TE KAUWHATA — The Corrections Department says it is unlikely that its proposed north Waikato prison site harbours unknown Maori burial sites.

Corrections plans to build a 650-bed men's prison on a 214ha property 5km south of Meremere.

The Auckland War Memorial Museum has confirmed it has held koiwi (human bones) recovered from an urupa within metres of the property since at least 1980.

North Waikato Tainui hapu Ngati Naho are seeking the return of the koiwi.

The museum's possession of the remains came to light only through investigations by residents of the area who oppose the prison plans. But Corrections chief financial officer Mike Martelli said in a statement issued yesterday the property was considered an unlikely site for urupa.

Mr Martelli confirmed Corrections had only learned of the urupa adjacent to its site in recent weeks, despite earlier archaeological scrutiny of the area.

The Times has repeatedly sought comment as to the fate of the koiwi but the museum's Director Maori Dr Paul Tapsell has yet to return any of the calls.

It is understood that Auckland hapu Ngati Whatua will formally return the remains to Waikato iwi:

A Corrections report by archaeology consultants Clough & Associates, released in June, found no apparent impediments to developing the proposed prison site.

Clough & Associates' report is

an archaeological evaluation of

the property.

It does not consider the presence of washi tapu or other traditional sites and recommends a detailed assessment of the prison site be carried out.

Mr Martelli said a resident had told Corrections staff of the koiwi held at the museum on September 7.

"The person was concerned that, while this discovery was clearly not on the Corrections site, there may be such sites on the Corrections property," he said.

"While the adjacent property has bluffs suitable for such a burial, the department's site across the stream is swampy land."

Mr Martelli said the proposed building platform for the prison was at least 500 metres from the urupa site.

WANGANUI CHRONICLE 16,000 daily

- 1 OCT 2001

PO. Box 13-330, Onehunga Auckland, New Zealand phone 634-0463. Fax 636-7607 want museum to return ancestral

Auckland Museum to hand back the remains of several ancestors it has had for more than

Ngati Naho spokespeople say the museum must explain how it came by the remains of up to seven Maori recovered from an urupa (burial site) in the 1970s.

The museum's possession of the remains only came to light through investigations by North Waikato residents, who oppose plans for a prison on a site 5km south of Meremere.

Ngato Naho spokesman Eni Pokaia said

HAMILTON — A Tainui hapu wants the hapu learned of the bones' existence

The discovery had generated a lot of illfeeling, he said, and answers were needed quickly on the history of the remains.

As it was not known which hapu the individuals belong to, their fate was an issue for Tainui kaumatua, he said.

Tainui kaumatua met last week to discuss the matter and whether the remains should be returned to where they were found, or reburied on Taupiri mountain.

Information released by the museum's archaeology curator Dr Nigel Prickett

showed the remains were found within metres of the proposed prison boundary fence.

The remains have been held at the museum since at least 1980 and are believed to include bones from several children and at least one adult male.

Dr Prickett said he understood the bones were given to the museum by a previous owner of the land where they were found.

He said it was "unlikely" that museum staff had participated in the recovery of the bones, but has refused to release site records to the Waikato Times.

"I just don't think the iwi would appreciate having the details of human remains that we might hold here put out into the public arena," he said.

"It's a delicate issue." He had previously told the Times the museum had no plans to return the remains to Tainui.

Mr Pokaia said that elders regarded the potential impact on plans for a prison as irrelevant.

"The main objective here is to get the bones back....

"Anything outside that has to take its own

course.

"If it's a means of putting a halt to the progress of the prison, then so be it," he said

Conservation Department archaeologis Neville Ritchie said the New Zealand Archaeologists' Association site record held no reference to the site.

The database lists known archaeologica sites associated with human activity.

However, if a farmer had found th remains and handed them in to the museur "we would never know that had happened Mr Ritchie said. — PA

Museum to return bones

TE KAUWHATA — Auckland museum and north Waikato hapu Ngati Naho are negotiating the return of human remains found south of Meremere in the 1970s.

The museum currently holds thousands of koiwi (human bones), which date back to the 19th century.

Its possession of the Meremere bones came to light when it was revealed bones had been found within metres of land earmarked by the Corrections Department for a new prison.

North Waikato residents opposed to the new prison discovered the existence of the remains when researching the area's history.

Museum Director Maori Dr Paul Tapsell yesterday said the museum did not hold any other remains from the area. "If there are, they are not known to us."

Dr Tapsell said museum records indicated its staff had no part in the bones' recovery.

He said the museum was discussing the appropriate return of the Meremere koiwi with elders of Ngati Naho.

"It is the museum's stated intention that it no longer wishes to be an urupa (burial site)," said Dr Tapsell.

Corrections' acting chief financial officer Mike Martelli has told the Times the department considered it "unlikely" that further remains lay on its land.

— Daniel Adams
