

memorandum

TO Dan Smyth FROM Jess Campbell
Classic Developments Limited DATE 17 December 2025
RE Executive Summary for Preliminary Site Investigation – Mount Welcome Pukerua Bay

1.0 Executive Summary of PSI

Pukerua Property Group LP is submitting a fast-track resource consent application for the development of a residential subdivision near Pukerua Bay. PDP was engaged to conduct a Preliminary Site Investigation (PSI) for the Mount Welcome development. This PSI consolidates two previously completed investigations for Lot 1 DP 534864 and Lot 2 DP 534864 and includes additional assessment for two properties at 422a and 422b State Highway 59 (Part Lot 1 DP 89102 and Lot 2 DP 89102), which were recently incorporated into the development plans.

This PSI aims to review available information to identify any Hazardous Activities and Industries List (HAIL) activities that have occurred or are likely to have occurred/be occurring on the site, assess potential contamination risks and evaluate compliance with the National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health (NESCS).

The investigation considered available information on historical land use, aerial imagery, and site observations.

The site has been used for pastoral and residential purposes since at least the 1940's. The following HAIL Category A8 activities were identified at Lot 1 DP 534864: a current sheep race, a historical sheep dip and woolshed. Several pre-1980's buildings were also identified as potential sources of asbestos and lead.

The NESCS is considered to apply to those areas of the site where HAIL activities were identified.

PDP recommends:

- ∴ A Detailed Site Investigation (DSI) to assess contamination, if any, in identified HAIL areas.
- ∴ An asbestos survey for all pre-2000 buildings prior to demolition, including testing of surrounding soils for lead and asbestos.
- ∴ Development of a Contaminated Site Management Plan to facilitate safe handling and disposal of impacted soils during construction.

2.0 Limitations

This memorandum has been prepared by Pattle Delamore Partners Limited (PDP) on the basis of information provided by Classic Developments Limited by PDP for the work. PDP has not independently verified the provided information and has relied upon it being accurate and sufficient for use by PDP in preparing the memorandum. PDP accepts no responsibility for errors or omissions in, or the currency or sufficiency of, the provided information.

This memorandum has been prepared by PDP on the specific instructions of Classic Developments Limited for the limited purposes described in the memorandum. PDP accepts no liability if the memorandum is used for a different purpose or if it is used or relied on by any other person. Any such use or reliance will be solely at their own risk.

PRELIMINARY SITE INVESTIGATION - MOUNT WELCOME PUKERUA BAY

1.0 Introduction

Classic Developments Limited (on behalf of Pukerua Property Group LP) (the client) has engaged Pattle Delamore Partners Limited (PDP) to undertake a preliminary site investigation (PSI) as part of the fast-track resource consent application for the Mount Welcome development located at Pukerua Bay, Mount Welcome. The overall development is understood to comprise of 949 lots for residential use, a neighbourhood centre, and associated roads and infrastructure.

This PSI is focussed on the properties Part Lot 1 DP 89102 and Lot 2 DP 89102 located at 442a and 422b State Highway (SH) 59, Pukerua Bay, Porirua, 5026. PDP have previously completed two PSIs for the wider property, a summary of these PSIs has been provided and the reports appended. The previous reports should be read in conjunction with this report.

This PSI has been undertaken in general accordance with the Ministry for the Environments (MfE) *Contaminated Land Management Guidelines No.1 – Guidelines for Reporting on Contaminated Sites in New Zealand* (MfE, 2021). It has been directed and reviewed by a suitably qualified and experienced practitioner as required by CLMG No.1 and the Resource Management (*National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health*) Regulations 2011 (NESCS). Certifying statements are attached.

2.0 Objectives and Scope

The objectives of this PSI are to:

- Determine, through information review, if an activity described in the MfE's Hazardous Activities and Industries List (HAIL) has been undertaken at the property.
- Conduct a preliminary assessment of the possible risk if a HAIL activity is identified.
- Consider the provisions of the NESCS.
- Provide further recommendations.

The scope of works included:

- ✦ Review previously completed reports.
- ✦ Obtain and review publicly available historical photographs.
- ✦ Obtain and review current and historical certificates of title (CTs).
- ✦ Interviewing people with knowledge of the site.
- ✦ Obtain and review property files from Greater Wellington Regional Council (GWRC) and Porirua City Council (PCC).
- ✦ Review publicly available geological and hydrogeological information for the site.
- ✦ Undertake a walkover of the previously unassessed area.
- ✦ Preparation of this comprehensive report, summarising previous completed works, the current PSI and findings.

Table 1 below describes the report layout with respect to the current and previous investigation areas.

Table 1: Report Layout			
Lot Numbers	Address	Development Area	Applicable Report/Sections
Part Lot 1 DP 89102 and Lot 2 DP 89102	442a and 422b State Highway 59	Western portion	This report
Lot 1 DP 534864/ Lot 2 DP 534864	422 State Highway 59	Central portion	Summarised in Sections 7.0 – 10.0 and Appendix C of this report. Full PSI report PDP, 2019 provided in Appendix G
Lot 2 DP 534864	422A State Highway 59	Eastern portion	Summarised in Sections 7.0 – 10.0 and Appendix C of this report. Full PSI report PDP, 2022 provided in Appendix G

3.0 Site Description and Background

The investigation area covers approximately 10.02 ha and is legally described as Part Lot 1 DP 89102 and Lot 2 DP 89102, herein referred to as ‘the site’, a figure showing the site boundary is appended (Figure 1). Figure 1 also outlines the wider development area and extent of the previous investigations, which covers a greater area than the current development plans.

The site is limited to the central western boundary of the development area and currently comprises two residential properties with associated outbuildings and paddocks used for livestock.

Under the jurisdiction of PCC it is zoned ‘Medium Density Residential Zone’ outlined as a ‘New Residential Zone’.

The surrounding land use is as follows:

North: Residential and pastoral.

East: Pastoral.

South: Pastoral.

West: State Highway 59 then woodland.

It should be noted that the wider application site (addressed in separate PSIs) comprises the following properties:

- ∴ Lot 1 DP 608433, Lot 1000 DP 608433 (34 Muri Road).
- ∴ Lot 1 DP 534864 (422 SH59)
- ∴ Lot 2 DP 534864 (422A SH59).
- ∴ Lot 2 DP 89102 (422B SH59).
- ∴ Part Lot 1 DP 89102 (422A SH59).
- ∴ Road Reserve (SH59 Corridor).

4.0 Proposed Development

The development plan provided by the client is appended (Figure 2). The development comprises 949 residential lots, a neighbourhood centre, and associated roads and infrastructure.

The development will include the removal of the existing residential dwellings within Part Lot 1 DP 89102, Lot 2 DP 89102 and Lot 1 DP 534864. The residential property and associated buildings within Lot 5003 (currently Lot 2 DP 534864) will remain in place.

The investigation area for this PSI is limited to the following properties:

- ∴ Lot 2 DP 89102 (422B SH59).
- ∴ Part Lot 1 DP 89102 (422A SH59).

5.0 Geology and Hydrogeology

The site topography is gently rolling with shallow gully features that trend in a south to north direction. Based on the published geology of the Wellington area (Begg, 2001) the site is bisected by a geological contact. The northern area of the site and the eastern boundary are underlain by Middle Pleistocene Fan deposits (poorly sorted loess covered fan gravel; alluvial gravel and lacustrine silt deposits), with the southern area of the site underlain by Undifferentiated Rakaia Terrane Deposits (alternating sandstone and mudstone, poorly bedded sandstone with minor coloured mudstone, conglomerate, basalt and chert).

There are two tributaries to the Taupo Stream within the site which flow in a westerly/south-westerly direction. This flows into Te Awareua-O Porirua Harbour.

Based on the topography the inferred groundwater flow direction is in a north westerly direction, towards the coast.

A search was undertaken on the GWRC database and no water take consents are within 1 km of the site.

The summary of historical information incorporates the whole development area for completeness.

6.0 Information Review

6.1 Historical Aerial Photographs

A review was taken of the available historical aerial photographs for the site. Five images were sourced from Retrolens¹ and four images were sourced from Google Earth Imagery, these provided in Appendix D. Historical aerial images for the rest of the development area are located in the previous reports in Appendix G.

¹ <https://retrolens.co.nz/>

Table 2: Historical Aerial Photographs

Date	Description
1942 (Historical Aerial Photograph 1)	The site is predominantly vacant pastureland. A small, fenced area is noted on the western boundary containing a small structure which partially bisects the site, it is not clear what this is.
1963 (Historical Aerial Photograph 2)	There are no significant changes. Vegetation appears to line the perimeter of the fenced area on the western boundary, suggesting it may be a residential property.
1973 (Historical Aerial Image 3)	The site is now vacant; the fenced area and structure are no longer present.
1988 (Historical Aerial Photograph 4)	No significant changes.
2000 (Historical Aerial Photograph 5)	There is a track along the western boundary which may be associated with the adjacent road upgrades depicted in this image.
2005 (Historical Aerial Photograph 6)	A defined accessway is now present. It enters the site from SH59 and forks off to Part Lot 1/Lot2 DP 89102. A residential property is present on the southeastern boundary within Lot 2 DP 89102.
2009 (Historical Aerial Photograph 7)	A residential dwelling is now present within Lot 1 along the southern boundary. There are also associate outbuildings present to the north of the main residential dwelling.
2019 (Historical Aerial Photograph 8)	No significant changes.
2025 (Historical Aerial Photograph 9)	No significant changes.

6.2 Certificates of Title

The current CTs for the site have been summarised below.

Table 3: CTs

Location	Title	Summary
Part Lot 1 Deposited Plan 89102	WN56D/260	The title pertains to 5.08 ha. The original registered owners are Huntleigh Downs Limited, in 2003, and the current registered owners are Pukerua Property Group LP, since August 2020.
Lot 2 Deposited Plan 89102	WN56D/261	The title pertains to 5.64 ha. The previous registered owners are Huntleigh Downs Limited in 2003. It has been registered to Pukerua Property Group LP since November 2020.

6.3 Greater Wellington Regional Council

A review of the GWRC Selected Land Use Register (SLUR) map viewer² showed no record of HAIL activities at the site. Email correspondence with GWRC confirmed this, and has been appended.

6.4 Porirua City Council

A property information request was made to PCC pertaining to contaminated land. PCC had no record of the site as a potential contaminated site. No other information was supplied. A copy of this correspondence has been appended.

6.5 Site Reconnaissance

A site walkover was undertaken on 25 June 2025, photographs from this visit are provided in Appendix E. The site was reflective of the most recent historical aerial image.

The site was accessed via a gravel driveway coming off SH59, which then splits with a road leading to each of the residential properties.

The residential property within Part Lot 1 DP 89102 is occupied however has several small storage sheds and a vacant outbuilding slightly to the north, which appeared to be used by livestock for shelter. The paddocks surrounding the residential property are separated by high fencing with evidence of livestock throughout.

This is also true for Lot 2 DP 89102, on either side of the accessway. The residential property at 422b SH59 is also occupied with numerous small storage sheds adjacent to the dwelling.

Overhead powerlines were noted to bisect the site in a north – south direction.

No evidence of HAIL activities was present.

7.0 Summary of Previous Reports

A summary of the previous investigations is provided in Tables 1 and Table 2 in Appendix C, the previous investigations pertain to the wider development and should be read in conjunction with this report for completeness. The previous reports are also appended. Where applicable, if new information is available since completion of the reports, it has been provided in the table.

Western Portion - Lot 2 DP 534864 Table 1 of Appendix C summarises a PSI (PDP, 2019) for part of Lot 1 DP 534864, excluding 442a SH59 and 422b SH59 (Part Lot 1 and Lot 2 DP 89102), which are covered by the rest of this report.

The western portion has been predominantly used for pastoral purposes since at least the 1940's until the present day with dwellings noted in the central northern area in 1942. The westernmost dwelling is no longer present by 1973. However, the second dwelling undergoes several reconfigurations up to the present day. Farm buildings and associated sheep yards and race are visible in the aerial images from 1961 to the present day. Between 1961 and 1979 the historical aerial images (Appendix G, PDP, 2022 page 20 and 21 (Appendix B)) depict what may be a sheep dip or spray race. Livestock dip or spray race operations are a HAIL activity (Category A8).

Potential sources of contamination at the site associated with past and present land use activities within the Lower Block are related to small scale farming activities. The potential for a sheep dip to have been present between 1961 and 1973 cannot be ruled out, however the location of potential sheep dip has been reconfigured, therefore potentially impacted surficial soils may have been removed. Between 1995 and 2002 (Appendix G, PDP 2022 pages 16 and 17 (Appendix B)) an extension to the building was added where the sheep dip was present and the woolshed removed. The holding pens and race with a concrete pad are still present.

The historical building on the western boundary present between 1942 and 1973, and farm buildings constructed prior to 2000 may also be a source of residual lead and asbestos contamination.

Central Portion - Lot 1 DP 534864 / Lot 2 DP 534864 The second PSI (PDP, 2022), summarised in Table 2 of Appendix C, pertains to part of Lot 1 DP 534864 and Lot 2 DP 534864 as outlined in the development plans (Figure 2).

The has been used for pastoral purposed since at least 1942. An unidentified structure noted near the central northern boundary may have been a former foundation pad for a water tank, however this is not confirmed.

Evidence of a residential property is present from 1995 which undergoes several reconstructions and extensions until 2011.

A helicopter hanger is present along the northeastern area of the site where an above ground storage tank (AST) and fuel storage for A-1 Jet Fuel. The first evidence of this hanger is the 2019 aerial image.

Minor storage of agrochemicals was observed in a shed on site during the site visit, with the shed first noted in the 2002 aerial image.

The storage of A-1 Jet fuel is a HAIL activity (Category A17) and the AST may be a HAIL activity depending on the content. The development plans show that that the HAIL area pertaining to the jet fuel storage and above-ground storage tank will not be part of the development and will remain, therefore these activities are not considered further in this report.

Eastern Portion – Lot 2 DP 534864 The second PSI (PDP, 2022), summarised in Table 2 of Appendix C, also pertains to Lot 2 DP 534864. The 2022 PSI also includes the area behind the proposed development area to the edge of the Lot 2 DP 534864 boundary, depicted in Figure 1. This area is no longer part of the development.

This part of the site has been undeveloped and used for pastoral purposes since at least 1942 – to the present day. No evidence of HAIL activities were noted.

7.1 Identified Potential HAIL Activities

The following potential HAIL activities/sources of contamination have been identified:

- ∴ Potential sheep dip / spray race operations.
- ∴ Several buildings are or were present with the development area. Buildings constructed prior to 2000 can be a source of asbestos contamination to surrounding soils from asbestos-containing building materials, buildings constructed prior to 1980 can be a source of lead to surrounding soils from lead-based paint. If asbestos and lead is present in these soils at concentrations sufficient to constitute a risk to human health or the environment the affected soils would be a Category I HAIL area.

8.0 Preliminary Conceptual Site Model

A risk to human health can only arise if there is a hazard (e.g. contaminated soil), a receptor (e.g. people) and an exposure pathway between the hazard and the receptor. The absence of any of these components means no risk can exist. A preliminary conceptual site model is presented for the entire proposed development in Table 4:

Table 4: Preliminary Conceptual Site Model			
Source	Pathway	Receptor	Pathway Linkage
Sheep Dip (HAIL Category A8) Building materials from pre-2000's buildings (potential HAIL Category I)	Dermal contact with soil and dust	Construction workers	Potentially complete – Short term exposure may be possible during soil disturbance works if elevated contaminants are present. Heavy metals associated with a potential former sheep dip, specifically arsenic, possibly the organochlorine pesticides DDT and dieldrin, and possibly zinc and copper may be present in soil in the vicinity of the dip, race and associated holding pens. Given the age of some buildings, it is possible that lead paint and asbestos containing materials may have been used with residual contamination in shallow soils, around the footprint of current and former buildings.
	Inhalation of ingestion of soil and dust		
	Dermal contact with soil and dust Inhalation and indigestion of soil and dust	Future users	Potentially complete – If contaminants are present in soils in concentrations which could pose a risk to human health and are accessible following development (noting that it is likely that surficial impacted soil will be removed during site development).

Table 4: Preliminary Conceptual Site Model

Source	Pathway	Receptor	Pathway Linkage
Asbestos from historical buildings and demolition activities	Inhalation of asbestos fibres in air mobilised by construction activities.	Construction workers	<p>Potentially complete – short term exposure possible during soil disturbance works.</p> <p>Asbestos containing material (ACM) may be present in residual soils from the demolition of buildings and around the footprint of older buildings still standing.</p>
	Inhalation and indigestion of soil and dust.	Future users	<p>Potentially incomplete – The residual risk ACM will depend on soil removal and the amount of exposed soils. Areas where the surface becomes sealed will not have an exposure pathway, however areas of soft landscaping may contain residual ACM.</p>

9.0 Consideration of the NESCS

Consideration of the NESCS has been applied to the whole development area for completeness.

The NESCS seeks to control activities on contaminated land so as to protect human health. The regulations apply to a “piece of land” which is described by one of the following (regulation 5(7)):

- (a) an activity or industry described in the HAIL is being undertaken on it.
- (b) an activity or industry described in the HAIL has been undertaken on it.
- (c) it is more likely than not that an activity or industry described in the HAIL is being or has been undertaken on it.

Secondly, as HAIL land, the NESCS will apply if one or more of the regulated activities in sub-clauses (2) – (6) of regulation 5 is to take place. Given the proposed redevelopment of the site, the most applicable activities that could apply are sub clauses (4) and (6).

- (4) An activity is disturbing the soil of the piece of land, which—
 - (a) means disturbing the soil of the piece of land for a particular purpose:
 - (b) does not include disturbing the soil of the piece of land, whatever the purpose, if the land is land to which regulation 33(9) or 36 of the Resource Management (National Environmental Standard for Electricity Transmission Activities) Regulations 2009 applies.
- (6) An activity is changing the use of the piece of land, which means changing it to a use that, because the land is as described in subclause (7), is reasonably likely to harm human health.

Under the NES-CS, regulation 8(3), disturbing the soil on ‘a piece of land’ is a permitted activity if the following requirements are met:

- (a) controls to minimise the exposure of humans to mobilised contaminants must —
 - (i) be in place when the activity begins:
 - (ii) be effective while the activity is done:
 - (iii) be effective until the soil is reinstated to an erosion-resistant state:

- (b) the soil must be reinstated to an erosion-resistant state within 1 month after the serving of the purpose for which the activity was done:*
- (c) the volume of the disturbance of the soil of the piece of land must be no more than 25 m³ per 500 m²:*
- (d) soil must not be taken away in the course of the activity, except that, —*
 - (i) for the purpose of laboratory analysis, any amount of soil may be taken away as samples:*
 - (ii) for all other purposes combined, a maximum of 5 m³ per 500 m² of soil may be taken away per year:*
- (e) soil taken away in the course of the activity must be disposed of at a facility authorised to receive soil of that kind:*
- (f) the duration of the activity must be no longer than 2 months:*
- (g) the integrity of a structure designed to contain contaminated soil or other contaminated materials must not be compromised.*

The information review has identified several potential HAIL areas shown on Figure 3. The extent and duration of earthworks within those areas is unknown. If the conditions of regulation 8(3) cannot be met a resource consent will be required under the NESCS for parts of the site which are considered to be HAIL. Development plans provided by the client indicate that the HAIL area pertaining to the jet fuel storage and above-ground storage tank will not be part of the redevelopment and will remain, therefore the NESCS does not currently apply to this area, however if it is to be disturbed and/or subdivided the NESCS will apply.

Under the NES-CS, regulation 8(4), subdividing land or changing the use of 'a piece of land' is a permitted activity if the following requirements are met:

- (a) a preliminary site investigation of the land or piece of land must exist:*
- (b) the report on the preliminary site investigation must state that it is highly unlikely that there will be a risk to human health if the activity is done to the piece of land:*
- (c) the report must be accompanied by a relevant site plan to which the report is referenced:*
- (d) the consent authority must have the report and the plan.*

Given that this PSI has not found that it is highly unlikely that a change of land use will be a risk to human health, the NES-CS will apply to the change of land use where potential HAIL areas have been identified.

10.0 Recommendations

The recommendations have considered the whole development area for completeness.

It is understood that the site and the wider area is going to be redeveloped for residential housing. Parts of the site where actual or potential HAIL activities have been identified will require further investigation to assess the potential contamination risk of residual contamination to the relevant human health guidelines or landfill waste acceptance criteria depending on soil fate.

Given the age of the structures within Lot 1 DP 534864 it is likely that an asbestos survey will be required prior to demolition. These buildings may also require shallow soil testing to identify potential lead and asbestos within the halo of the buildings.

A detailed site investigation is recommended within the identified potential HAIL/source areas to determine the presence of potential contamination and to determine whether the NESCS will be triggered for soil disturbance and/or subdivision.

A contaminated site management plan (CSMP) will also be required for the duration of the development works to address the risk of accidental discovery of contamination within the area of. Any soils which are to be removed and disposed of during the development will require testing prior to disposal against the relevant facilities soil disposal acceptance criteria.

Appendix A: Certifying Statement

I, Nerena Rhodes, of Pattle Delamore Partners Limited certify that:

1. This preliminary site investigation meets the requirements of the Resource Management (*National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health*) Regulations 2011 (the NESCS) because it has been:
 - a) done by a suitably qualified and experienced practitioner, and
 - b) reported on in accordance with the current edition of *Contaminated land management guidelines No 1 – Reporting on contaminated sites in New Zealand*, and
 - c) the report is certified by a suitably qualified and experienced practitioner.

Evidence of the qualifications and experience of the suitably qualified and experienced practitioner(s) who have done this investigation and certified this report is appended to this report.

This certification applies to the date of this report.

Signed:

Nerena Rhodes

Technical Director – Contaminated Land

Certifying Statements

Nerena Rhodes – Reviewer and Approver

Nerena is an environmental scientist with over 20 years of experience in undertaking environmental and contaminated land assessments. She has a BSc in Biology and a MSc in Environmental Science from the University of Auckland. Nerena has experience with organising and undertaking site investigations, environmental assessments, and monitoring programmes for a range of environmental issues, across a broad range of media including soil, sediment, surface water and groundwater; and for a wide range of contaminants including heavy metals, petroleum hydrocarbons, organic chemicals and asbestos. Nerena has experience in the assessment of data. She has familiarity with and understanding of the current contaminated land regulation and practice in New Zealand including assessments against the NESCS.

Melody Robyns – Reviewer

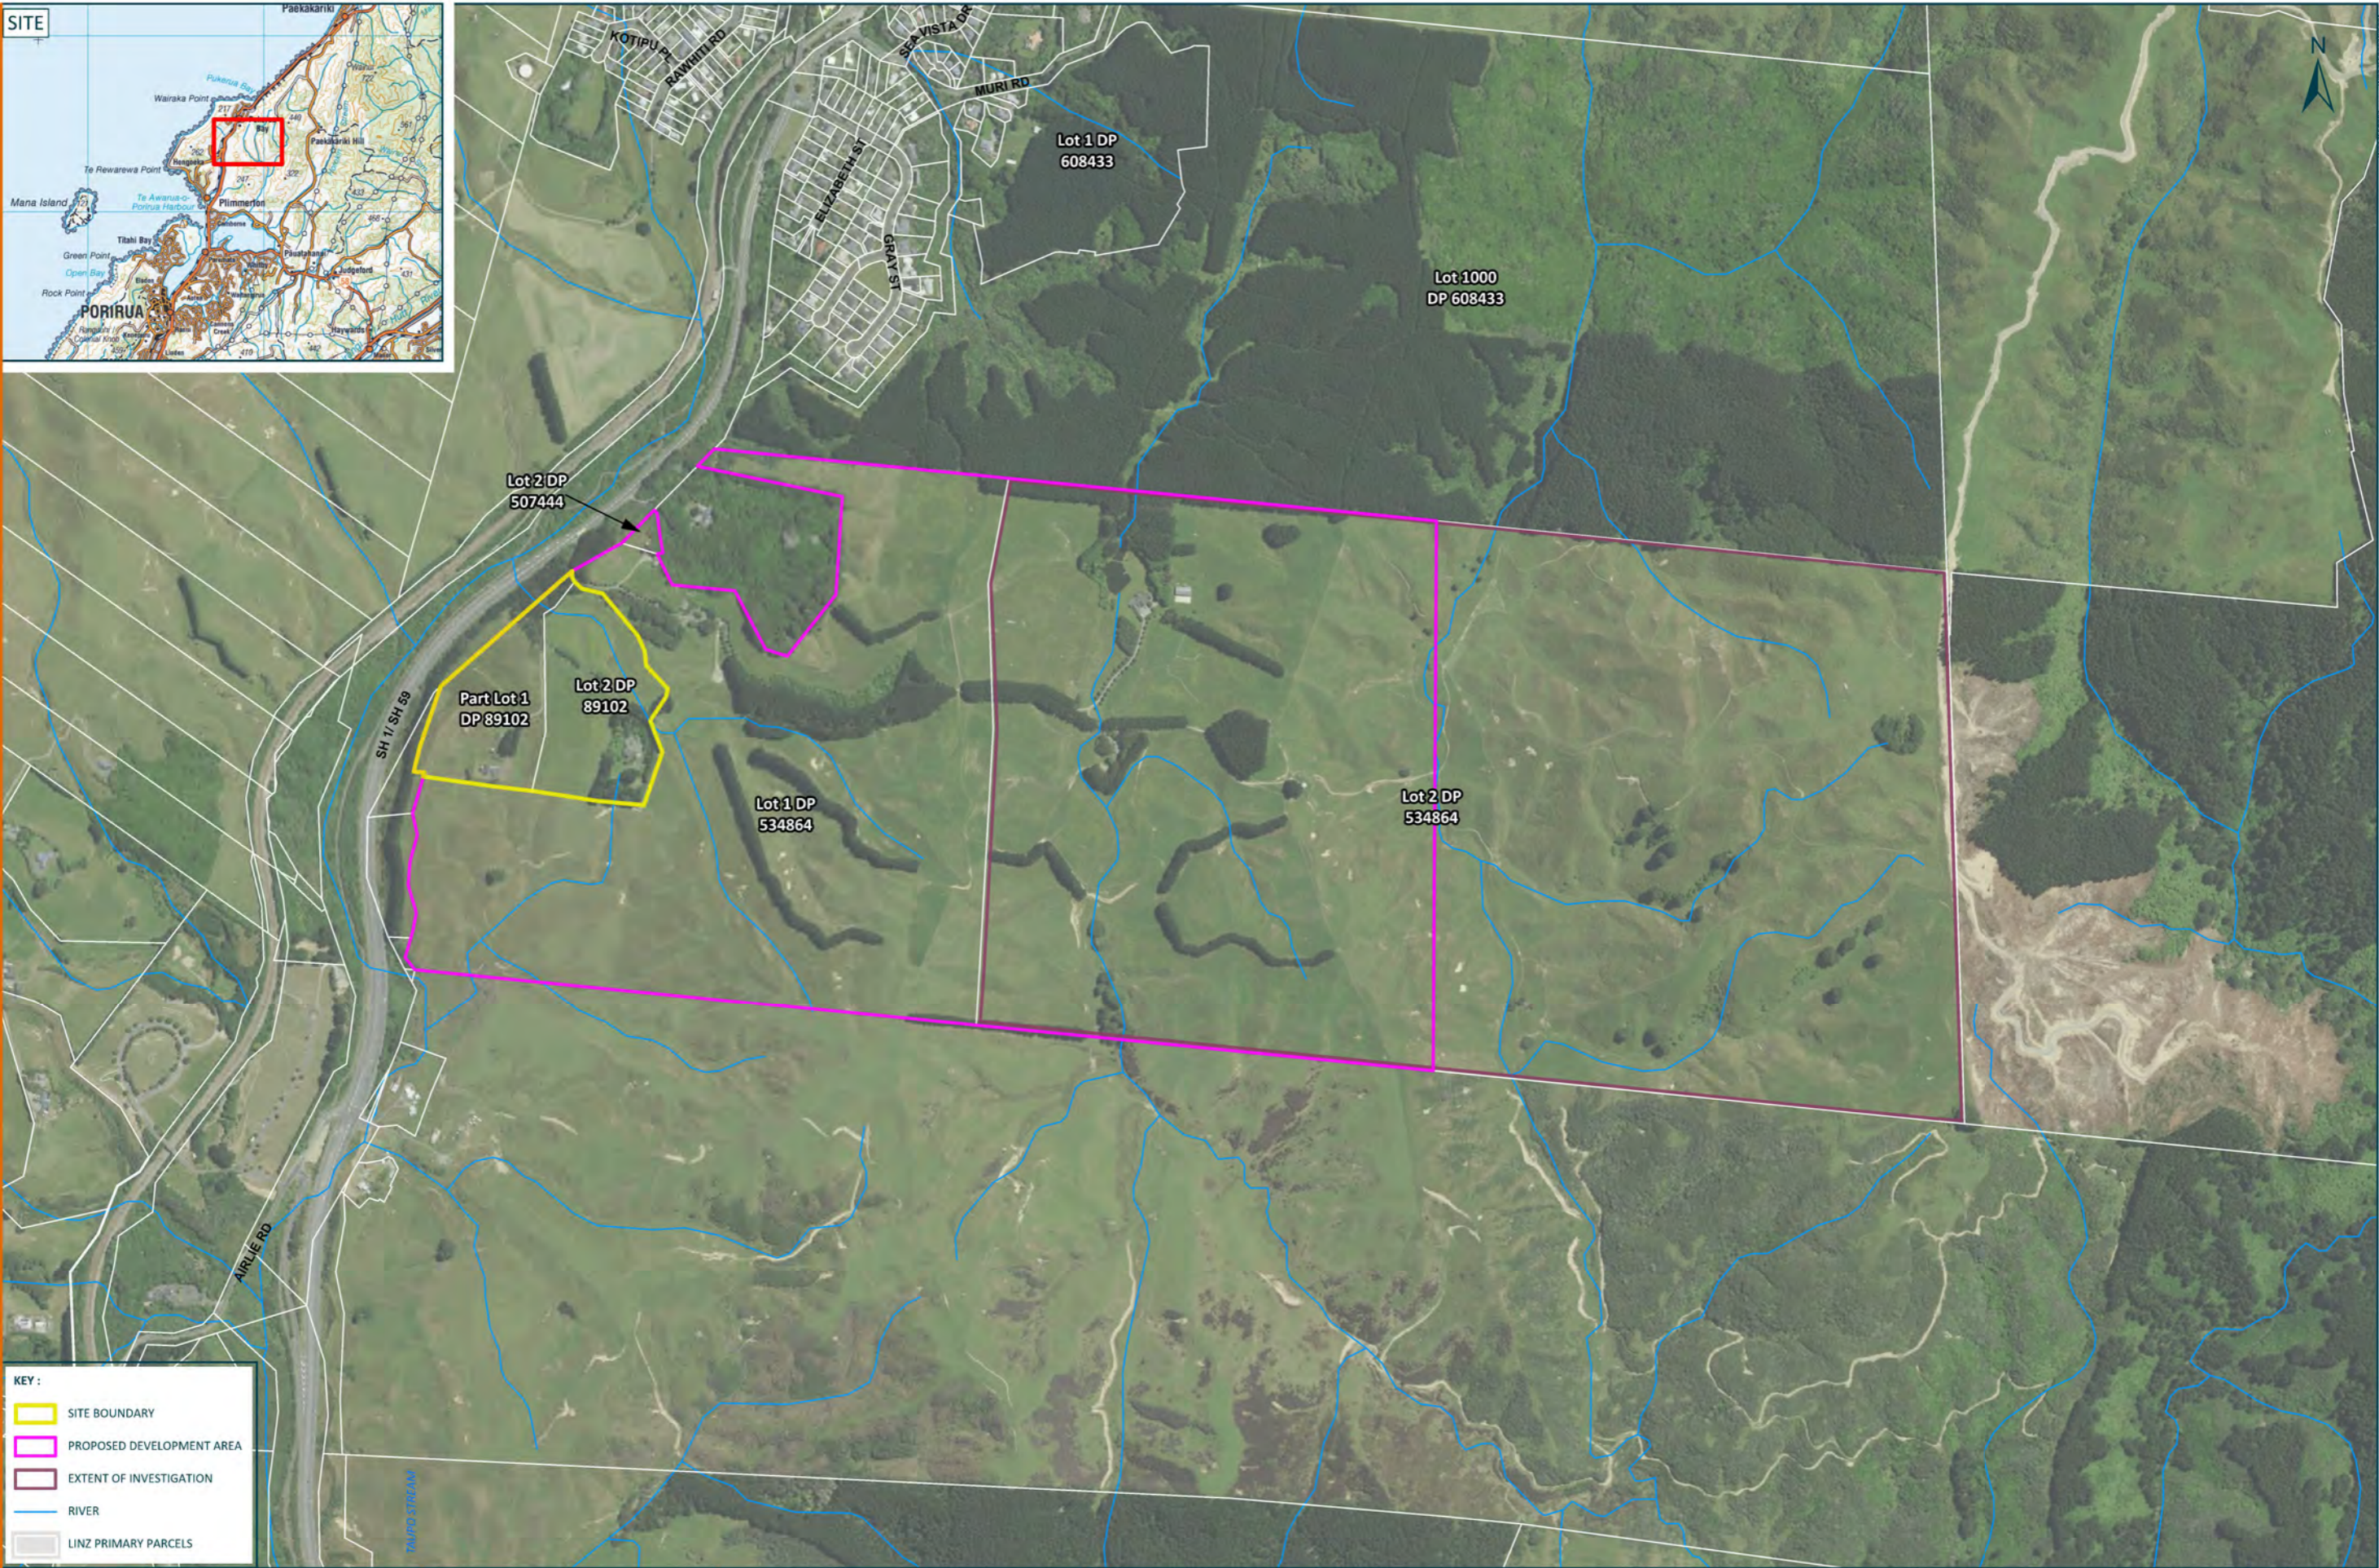

Melody is an Environmental Scientist with a Master of Science in Physical Geography. Melody has a background in environmental site investigations and contaminated land assessments. She is an experienced project manager with over 10 years' experience and is competent in risk identification, mitigation and problem solving. Her involvement in projects includes project management, technical input, risk assessments and liaison with stakeholders.

Jess Campbell – Project Manager, Information Assessor and Author

Jess is a Senior Environmental Geologist with 6 years' experience in undertaking contaminated land assessments across New Zealand and the UK. She has a MEdSci in Geology and Physical Geography from the University of Liverpool. Jess has practical experience in undertaking and managing investigations and ongoing monitoring of soil and groundwater for industrial, commercial and residential land development projects. Jess has experience in the interpretation and implementation of the NES-CS.

Appendix C: Summary of Previous Reports

Table 1: Summary of PDP, 2019		
Report Section	Summary	New Information
Site Description	The investigation area covered an area of 55.17 ha, legally described as Lot 3 Deposited Plan 89102. The site was noted to be predominantly pastoral farmland and residential land use.	<p>No longer zoned as 'Rural Zone', now zoned as 'Medium Density Residential Zone' within a 'New Residential Zone'.</p> <p>As of 2021 any reference to SH1 is redundant as the road was renamed to SH59.</p> <p>A site visit undertaken on 21 May 2025 confirmed that there have been no significant changes since the original site visit.</p>
Geology and Hydrogeology	<p>The site is gently rolling with shallow gully features trending in a north – south direction. A geological contact is noted to run through the property in a northeast – southwest direction. The western side is underlain by Middle Quaternary alluvium and colluvium with the eastern area underlain by Rakaia Terrane Deposits.</p> <p>Groundwater is inferred to flow in a north westerly direction.</p>	N/A
Summary of Historical information	<ul style="list-style-type: none"> ∴ Historical aerial imagery indicates that the site has been utilised for pastoral purposes since the 1940's. ∴ Evidence of a potential sheep dip or spray race is present in images from 1961 and 1979. Interviews with the owner indicate that no sheep dipping or spraying has occurred in the last 10-15 years. ∴ No evidence of firefighting foams has been recorded. ∴ No evidence of HAIL activities have been recorded or provided by GWRC or PCC. 	
Consideration of the NESCS	With the exception of the potential sheep dip, no other HAIL activities have been undertaken at the site.	See section 8.0.

Table 2: Summary of PDP, 2022

Report Section	Summary	New Information
Site Description	<p>The site covers an area of 140.23 ha and is legally described as Lot 2 Deposited Plan 534864. The site is predominantly pastoral farm land with two residential dwellings identified. The Kakaho Special Amenity Landscape area falls in the south east corner of the site.</p>	<p>The site is now zone as 'Medium Density Residential Zone' (Upper Block and Lucus Block) and 'Rural Lifestyle Zone' (Rear of Lucus Block). The Upper and Lucus Blocks are within the "New Residential Zone"</p> <p>As of 2021 any reference to SH1 is redundant as the road was renamed to SH59.</p> <p>A site visit undertaken on 21 May 2025 confirmed that there have been no significant changes since the original site visit.</p>
Geology and Hydrogeology	<p>The site is gently rolling with shallow gully features trending in a north – south direction. The site is underlain by Rakaia Terrane Deposits with a thin segment of Holocene alluvial deposits which runs from north to south, comprising well sorted floodplain gravels.</p> <p>Three tributaries of the Kakaho Stream which run through the site, oriented north-south, flowing into Te Awareua-O Porirua Harbour.</p> <p>Based on topography the inferred groundwater flow direction is in a southerly direction towards the harbour.</p>	
Summary of Historical information	<ul style="list-style-type: none"> ∴ Historical aerial imagery indicates that the site has been utilised for pastoral purposes since the 1940's. ∴ An unidentified structure is present in two historical aerial images (1966 and 1973), which is likely to be a spray race, however it was no longer present during the site walkover. Correspondence with a site representative indicates that the visible concrete pad may be the foundations for a former water tank. ∴ An AST and fuel storage for A-1 jet fuel was noted on site. No indication of what was in the AST was present. 	<p>Liaison with the client confirm that the residential property and helicopter hanger are not part of the current development plans.</p>

Table 2: Summary of PDP, 2022

Report Section	Summary	New Information
	<ul style="list-style-type: none"> ∴ Minor storage of agrichemicals were present on site. ∴ No HAIL records were identified or provided by GWRC or PCC. 	
Consideration of the NESCS	<p>The NESCS will apply to the storage of jet fuel and AST under category A13. It was concluded that there was insufficient evidence that the potential area outlined as a sheep dip/spray race was not considered 'more likely than not' used for these purposes.</p> <p>The NESCS will apply to the subdivision of the site and a detailed site investigation (DSI) will be required to assess the risk to human health in the vicinity of the helicopter hanger and AST.</p>	See section 8.0.
Conceptual Site Model	The PSI identified that there was a potentially complete pathway for site users, groundwater and surface water if a spill or leak from the storage of unknown substances in the AST or jet fuel. Given that the underlying soils are inferred to be porous a migration pathway is present.

Appendix G: Previous Reports

27 August 2019

Stuart Dixon
Project Manager
Classic Developments Ltd
1 Tradewinds Drive
PORIRUA 5024

Dear Stuart

PRELIMINARY SITE INVESTIGATION, MT WELCOME STATION

1.0 Introduction

Classic Developments Limited has engaged Pattle Delamore Partners Limited (PDP) to undertake a preliminary site investigation (PSI) for a site comprised of one parcel of land legally described as Lot 3 Deposited Plan 89102 located at 422 State Highway 1, Pukerua Bay. This PSI has been undertaken to meet the objectives of Classic Developments' proposed development plans (Appendix A) for the site. Henceforth the property at 422 State Highway 1 is referred to as 'the site'.

This desktop review has been limited to a review of existing available information for the site including; council records, property title information, historical aerial photographs and Fire & Emergency New Zealand (FENZ) records. Following the desktop review, a walkover of the site was undertaken by PDP staff on 14th June 2019.

This report provides the results of the PSI review and has been prepared in general accordance with the requirements of the Ministry for the Environment (MfE) '*Contaminated Land Management Guideline No. 1: Reporting on Contaminated Sites in New Zealand*' (CLMG No. 1) (MfE, 2011a). It has been certified by a suitably qualified and experienced practitioner as required by the *Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011* (the NES).

2.0 Project Objectives

Classic Developments intend to redevelop the site for residential purposes. The size of the proposed residential properties range from 200 m² to 800 m². Classic Developments has been advised by Porirua City Council that in order to support its intent to change its planning document a PSI is required to:

- Determine whether any activities from the Hazardous Activities and Industries List ¹ (HAIL) are currently, have been, or are more likely than not to have been occurring at the site; and therefore, Whether the NES applies to the site development, and consents must be sought under the NES to permit development activities.

¹ The Hazardous Activities and Industries List is a compilation of activities and industries that are considered likely to be a source of land contamination from the use, storage or disposal of hazardous substances. The list was prepared and published by MfE (2011).

3.0 Scope

The scope of the PSI review work undertaken by PDP to fulfil the project objectives has included:

- ∴ A review of a selection of publicly available aerial photographs;
- ∴ A review of Certificates of Title (CT) for the site;
- ∴ A review of the Greater Wellington Regional Council (GWRC) Selected Land Use Register (SLUR) data available for the site;
- ∴ A review of Porirua City Council property information files for the site;
- ∴ A review of Fire & Emergency New Zealand information related to the property;
- ∴ An interview with the current site owner, and the neighbour occupying 434 State Highway 1, to determine the historical use of the site, with a specific focus on identifying potential contamination sources and/or land uses;
- ∴ A walkover of the property to visually inspect the site conditions including any historical infrastructure that can be identified;
- ∴ Consideration of the NES Regulations; and
- ∴ Preparation of this report that summarises the findings of the information review.

4.0 Site Description

The site covers an area of 55.17 ha and is legally described as Lot 3 Deposited Plan 89102. Under the jurisdiction of Porirua City Council, the site is zoned 'Rural Zone'. The site runs adjacent to State Highway 1, and wraps around the properties at 422A, 422B and 434 State Highway 1, Pukerua Bay (which are outside of the scope of this report) before rejoining State Highway 1 north of the property at 434 State Highway 1. The site extends inland to the east and is bounded by other rural properties to the north, south, and east. The site is largely pastoral farmland and residential rural land use. There are no major tributaries or streams that run through the site.

Currently the site is used for pastoral purposes, specifically for grazing sheep and deer. The grazing of deer has only begun within the last ten years. The structures on site include one woolshed, a stand-alone race/docking area and a residential property. The majority of these structures are located in the area 200 m east of State Highway 1. A lean to was added to the woolshed within the last ten years. Driveway access to the site from State Highway 1 is located at the north-western corner of the site. Further detail of the site buildings and land features is described in Section 6.0, as observed during the site walk over.

5.0 Geology and Hydrogeology

The site topography is gently rolling with shallow gully features that trend in a south to north direction. Based on the published geology of the Wellington area (Begg, 2001) there is a geological contact running through the property which runs from north east to south west. The western area of the site is underlain by Middle Quaternary alluvium and colluvium which consists of gravel, sand and mud, with rare non welded ignimbrite and tephra. The eastern area of the site is underlain by the Rakaia Terrane sediments which consists of interbedded sandstone and mudstone with minor conglomerate, basalt and chert.

Based on topography the inferred groundwater flow direction is in a north westerly direction (toward the coast).

6.0 Historical Site Information

6.1 Aerial Photographs

A review was undertaken of a selection of the available historical aerial photography for the site, and included photos from 1942, 1961, 1979, 1986, 1995, 2002, 2011 and 2018, sourced variously from the Alexander Turnbull Library and Google Earth Imagery. Copies of the historical aerial photographs from 1942, 1961, 1979, 1986, 1995, 2002, 2011 & 2018 are provided in Appendix B. The following key findings from the aerial photographs with respect to the history and use of the site are summarised in Table 1.

Table 1: Summary of Historical Aerial Photographs	
Year	Description of Site Use
1942	The site and the surrounding land appears to be in use for pastoral purposes. The buildings/structures which are present on site include the present-day residential dwelling and woolshed, located in the western area of the site in proximity to Stage Highway 1. Driveway access to the structures is via State Highway 1 (as it remains to this day). There appears to be a small residential structure in the south west corner of the site. Use known.
1961	The site use remains unchanged from pastoral use. The dwelling to the north at 434 State Highway 1 has been constructed sometime between 1942 and 1961. There is also a small structure to the east of the woolshed on the site which has been constructed, which may have been associated with a sheep dip. Additionally, a woolshed farmtrack is visible, as is a greenbelt area south of the woolshed.
1979	The site use remains unchanged from pastoral use. The woolshed area has been further developed, and includes the present day dock/race structure, as well as an increase in the number of sheep holding pens to the north of the woolshed. Structures which may be associated with a sheep dip are visible, a pen has been added in this location. The structure in the south west of the property (as observed in the 1942 photograph) has been removed and no longer appears.
1986	The site uses remains unchanged from pastoral use. The bush area immediately to the south of the woolshed has been cleared. The structures appear unchanged from the 1979 photo.
1995	The site use remains unchanged from pastoral use. The structures appear unchanged from the 1986 photo.
2002	The site use remains unchanged from pastoral use. The structures appear unchanged from the 1995 photo.
2011	The site appears relatively unchanged from the 2002 photo, with the exception of the following; landscaping works and what appears to be the installation of a concrete driveway to the residential dwelling, and further planting in the area surrounding the woolshed. Buildings have been constructed on 422A and 422B State Highway 1 to the south of the site between 2006 and 2011.
2018	Both the site use and the structures present on the site appear unchanged from the 2011 photo.

6.2 Certificates of Title

The current and historical CTs for the site are summarised in Table 2 below with further information provided where relevant. Historical CTs were found dating back to 1887. The CTs are attached in Appendix C.

Table 2: Relevant Information from Certificates of Title	
Legal Description	Certificate of Title
Lot 3 Deposited Plan 89102	WN56D/262 (issued in 2003) <ul style="list-style-type: none"> ∴ The current CT concerns 196.882 ha of land ∴ The current proprietorship is listed as The Mt Welcome Family Trust Limited
Lot 3 Deposited Plan 89102	16D/680 (issued in 1976) <ul style="list-style-type: none"> ∴ The current CT concerns 84.63 ha of land. ∴ The current site proprietorship is listed as James Andrew Gray of Plimmerton.
Lot 3 Deposited Plan 89102	WN44/252 (issued in 1887) <ul style="list-style-type: none"> ∴ The current CT concerns 80.94 ha of land. ∴ The original proprietorship is listed as Huntleigh Downs Limited.

6.3 Fire and Emergency New Zealand Records

FENZ records were obtained directly from Fire & Emergency New Zealand, and these are included in Appendix D. FENZ hold no record of fire incidents or the use of fire fighting foams on the site (Appendix D).

6.4 Greater Wellington Regional Council Records

A review of the SLUR database on the GWRC's Webmap showed no record of HAIL activities at 422 State Highway 1 (Appendix D).

6.5 Porirua City Council Records

A property information request and contaminated land enquiry was requested from Porirua City Council. The Council had no record of the site as a potential contaminated site (Appendix D). The property file did not contain any evidence of HAIL activities having been conducted on the site.

7.0 Site Reconnaissance and Interviews

A site walkover was undertaken by PDP staff on the 14th June 2019. An interview was completed with Mr Dave Riley, a representative of the current site owner (The Mt Welcome Family Trust Limited); and with the owner of the homestead located in the property at 434 State Highway 1, to the north of the site; Mr Peter Smith. Photographs are shown in Appendix E.

7.1 Site Observations

The following site observations were made during the site walkover:

- ∴ All of the site buildings and structures which included a residential dwelling, woolshed (with additional lean-to structure) and a dock/race structure with concrete pad were related to the historical and current land use for deer/sheep farming purposes. The location of the site buildings and structures was consistent with the 2018 aerial image of the site.
- ∴ There were bulk stores no chemicals or hazardous substances stored on site.
- ∴ There were no bulk fuel storage containers or tanks on site.
- ∴ There were no observed sheep dips or spray structures on the site.
- ∴ There was no spraying equipment observed on site.

7.2 Interviews

An interview was completed with David Riley, a representative of the current site owner, on 14th June 2019, and the following historical information was noted:

- ∴ The current owners have owned the property for approximately 10 years. In that time the site has continued to be sheep farming/pastoral land as per the survey of historic records.
- ∴ He noted no hazardous activities (such as fuel storage) as having occurred in his experience on the site.
- ∴ The lean-to structure was added to the woolshed structure approximately ten years ago
- ∴ The owner stated that no sheep dipping activities have occurred on the property. The dock/race had been used for drenching of sheep but this was carried out on the concrete foundation (as per the site walkover).

Following this discussion with the owner a second interview was conducted with the owner of the neighbouring property at 434 State Highway 1, Pukerua Bay. He related the following information:

- ∴ That the owner was a rural lifestyle block owner who ran approximately 200 ewes south of his property. He had lived in the property for 10 years.
- ∴ The owner noted that 422 State Highway 1, along with the properties at 422A & 422B State Highway 1 had been a part of a larger parcel of land, which had been subdivided (as per the aerial images).
- ∴ The owner confirmed, as per previous discussions that no hazardous activities had appeared to be carried out on site related to sheep dipping or fuel storage etc.

8.0 Information Summary

Based on the findings from this PSI for the site located at 422 State Highway 1, Pukeura Bay, Wellington, the following information on the current and historical land use at the site is summarised:

- ∴ The aerial photographs show that the site was utilized for pastoral purposes from the 1940s until the present day.
- ∴ Two aerial photographs from 1961 and 1979 show structures which may have been a sheep dip or spray race. This is not unexpected as sheep dips were historically very common, and treating sheep with an external chemical insecticide was historically a legal requirement (MfE, 2006).
- ∴ During the site walkover there was no evidence of any HAIL activities observed.

- ∴ Through anecdotal information from the site owner, no sheep dipping or spraying activities have been observed or carried out in the last 10 – 15 years.
- ∴ No use of fire fighting foams or fire emergency equipment has been recorded by Fire and Emergency New Zealand.
- ∴ No records related to HAIL activities have been recorded by Greater Wellington Regional Council; and none of the documentation on the Porirua City Council property information file indicated that HAIL activities have taken place on the property.

Based upon all of the available information, the only potential sources of soil contamination associated with the past and present land use activities within the site are related to the small scale farming activities. No evidence was found for the bulk storage of hydrocarbons, and there was no evidence found of a sheep dip or spray on site during the site visit. Nevertheless, given that sheep dipping was common practice historically, and the possibility of structures associated with sheep dips evident in the 1961 and 1979 aerial photographs, the presence of a historical sheep dip cannot be ruled out.

9.0 Consideration of the NES

The NES seeks to control activities on contaminated land so as to protect human health. Regulations apply to a 'piece of land' which is described as a site or the area of a site where an activity or industry described in the HAIL is currently, or has been, or is more likely than not to have been, undertaken on it.

With regards to the findings from this investigation, with the exception of the potential for a sheep dip, no other HAIL activities have been found to be occurring, or to have occurred in the past. Other than in the area of the site where the sheep dip may have been located, there are considered to be no significant potential sources of contamination associated with the past and present land use activities identified at the site.

Hi Kate,

I've included below the acknowledgement letter for this property request, and will have the building file sent to you as soon as possible. Also, if you had contaminated land and/or resource consent enquiries I will forward your email to the appropriate teams.

Thank you

Regards

Liam Maher

Dear Sir/Madam

Thank you for your request received on 20th May relating to 422 State Highway 1

Your request has been assigned to the appropriate officer and you can expect a reply within 20 working days from the date the request was received by council.

Process for accessing files:

1. In your inbox, open the email from tempo@pcc.govt.nz (please check your junk mail if you haven't received an email in your inbox).
2. Click on the link in the email. If you are not an existing customer you will be asked to create an account

When creating an account the password must have at least one number, one uppercase letter, one lower case letter and one special character and be at least 6 characters in length. E.g. Pass66@Karen

3. You will receive a second email welcoming you to tempo box – use your email address and the password will be the one created in the account setup

4. When you are in the Tempo Box screen, you will see a little red box in the top right hand corner of the screen by your name. Click on the red box to retrieve your file.
5. Once you have retrieved your file from Tempo Box, please save it to your PC, USB or Device

Yours sincerely

Liam Maher

Hi there,

Can you please provide council property files and contaminated land enquiry pertaining to the site above (422 State Highway 1, Pukerua Bay).

The site is known as Mt Welcome Station and is 55.1700 ha.

Thanks,
Kate

Dear Kate

Information Request – Fire Incidents and use of firefighting foams at 422 State Highway 1, Pukerua Bay.

I refer to your official information request dated 21 May 2019 asking for any information relating to fire incidents and the use of firefighting foams at 422 State Highway 1, Pukerua Bay.

Fire and Emergency New Zealand holds no record of fire incidents or use of firefighting foams at the address you have provided. We hope this is helpful to you.

You have the right to seek an investigation and review by the Ombudsman of this decision. Information about how to make a complaint is available at www.ombudsman.parliament.nz or freephone 0800 802 602.

Yours sincerely

PORIRUA 5024

Dear David

PRELIMINARY SITE INVESTIGATION, LOT 2 DP 534864, MT WELCOME STATION

1.0 Introduction

Classic Developments Limited has engaged Pattle Delamore Partners Limited (PDP) to undertake a preliminary site investigation (PSI) for a site comprised of one parcel of land legally described as Lot 2 Deposited Plan 534864 located at 422A State Highway 1, Pukerua Bay. This PSI has been undertaken to support proposed residential development of the site and to complement a PSI undertaken for the adjacent property at 422 State Highway 1 (Lot 3 DP 89102) by PDP (2019). Henceforth the property at 422A State Highway 1 is referred to as 'the site'.

This desktop review has been limited to a review of existing available information for the site including; council records, property title information, historical aerial photographs and Fire & Emergency New Zealand (FENZ) records. Following the desktop review, a walkover of the site was undertaken by PDP staff on 10 December 2021.

This report provides the results of the PSI review and has been prepared in general accordance with the requirements of the Ministry for the Environment (MfE) '*Contaminated Land Management Guideline No. 1: Reporting on Contaminated Sites in New Zealand*' (CLMG No. 1) (MfE, 2021). It has been certified by a suitably qualified and experienced practitioner as required by the *Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011* (the NES).

We understand this report will be used to assist Porirua City Council (PCC) in preparing a variation to its Proposed District Plan. In preparing its variation for the Northern Growth Area (NGA), PCC are particularly interested in whether or not any specific planning provisions should be included in the planning document in relation to potential contamination or hazardous substances.

2.0 Project Objectives

Classic Developments intend to redevelop the site mainly for residential purposes, with some small-scale commercial activities. The steeper parts of the site will be used for lifestyle blocks. This PSI is required to:

- ∴ Determine whether any activities from the Hazardous Activities and Industries List ¹ (HAIL) are currently, have been, or are more likely than not to have been occurring at the site; and therefore,
- ∴ Whether the NES applies to the site development, and consents must be sought under the NES to permit development activities.

3.0 Scope

The scope of the PSI review work undertaken by PDP to fulfil the project objectives has included:

- ∴ A review of a selection of publicly available aerial photographs;
- ∴ A review of Certificates of Title (CT) for the site;
- ∴ A review of the Greater Wellington Regional Council (GWRC) Selected Land Use Register (SLUR) data available for the site;
- ∴ A review of Porirua City Council property information files for the site;
- ∴ A review of Fire & Emergency New Zealand information related to the property;
- ∴ An interview with a representative of the current site owner to determine the historical use of the site, with a specific focus on identifying potential contamination sources and/or land uses;
- ∴ A walkover of the property to visually inspect the site conditions including any historical infrastructure that can be identified;
- ∴ Consideration of the NES Regulations; and
- ∴ Preparation of this report that summarises the findings of the information review.

4.0 Site Description

The site covers an area of 140.23 ha and is legally described as Lot 2 Deposited Plan 534864. Under the jurisdiction of Porirua City Council, the site is zoned part 'Future Urban Zone' and part 'Rural Lifestyle Zone'. The site is listed as 422A State Highway 1, and is bordered by 422 State Highway 1 (PDP, 2019), 310 State Highway 1, 34 Muri Road and Paekakariki Hill Road (which are outside of the scope of this report). The site is bounded by other rural properties to the north, south, and west. The site is primarily pastoral farmland and residential land, with two residential dwellings on site. The Kakaho Special Amenity Landscape area falls in the south eastern site corner.

Driveway access to the site from State Highway 1 is located to the west of the site. Further detail of the site buildings and land features is described in Section 7.0, as observed during the site walk over.

5.0 Geology and Hydrogeology

The site topography is gently rolling with shallow gully features that trend in a south to north direction. Based on the published geology of the Wellington area (Begg, 2001) the site is underlain by the Rakaia Terrane sediments which consists of interbedded sandstone and mudstone with minor conglomerate,

¹ The Hazardous Activities and Industries List is a compilation of activities and industries that are considered likely to be a source of land contamination from the use, storage or disposal of hazardous substances. The list was prepared and published by MfE (2011).

basalt and chert. Within the western site area, there is a thin segment of Holocene alluvial deposits which runs from north to south, and consists of well sorted floodplain gravels.

There are three tributaries of the Kakaho Stream which run through the site, orientated north-south. This flows on into Te Awareua-O Porirua Harbour. Based on topography the inferred groundwater flow direction is in a southerly direction (towards Te Awareua-O Porirua Harbour).

6.0 Historical Site Information

6.1 Aerial Photographs

A review was undertaken of a selection of the available historical aerial photography for the site from 1942, 1966, 1973, 1988, 1995, 2002, 2011 and 2019, sourced variously from Retrolens and Google Earth Imagery. Copies of the historical aerial photographs are provided in Appendix B. The following key findings from the aerial photographs with respect to the history and use of the site are summarised in Table 1.

Table 1: Summary of Historical Aerial Photographs	
Year	Description of Site Use
1942	The site and the surrounding land appears to be in use for pastoral purposes. No buildings or structures are apparent on the site.
1966	The site use remains unchanged from pastoral use. An access track has been built through the central portion of the site, leading from the adjacent property at 422 State Highway 1. There is a small structure apparent along the northern boundary which appears to be a small fenced area (possibly a spray race) or a potential building platform.
1973	The site uses remains unchanged from pastoral use. The area noted in the 1966 image is slightly visible, however this appears to be mostly removed. No other buildings or structures are apparent on the site.
1988	The site uses remains unchanged from pastoral use. No buildings or structures are apparent on the site.
1995 (Part Site)	This image is only available for the western portion of the site. No buildings or structures are apparent on the site, and the site use remains as pastoral.
2002	Three buildings (two apparent residential dwellings and a smaller building) are now visible, located along the access track which cuts through the central portion of the site. A body of water is present adjacent to the dwelling in the north western portion of the site. The remaining site area remains as pastoral land use.
2011	The site remains unchanged since the 2002 aerial photograph, with the three buildings still present on site and the majority of the site being used as pastoral land.
2019	An additional large building is present adjacent to the dwelling located within the north western portion of the site. No other change is noted since the 2011 aerial photograph.

6.2 Certificates of Title

The current and historical CTs for the site are summarised in Table 2 below with further information provided where relevant. Historical CT records were found dating back to 1887. The CTs are attached in Appendix C.

Table 2: Relevant Information from Certificates of Title

Legal Description	Certificate of Title
Lot 2 Deposited Plan 534864	883072 (issued in 2019) <ul style="list-style-type: none"> ∴ The current CT concerns 140.254 ha of land. ∴ The current proprietorship is listed as The Mt Welcome Family Trust Limited.
Lot 3 Deposited Plan 89102	WN56D/262 (issued in 2003) <ul style="list-style-type: none"> ∴ The CT concerns 196.882 ha of land. ∴ The original proprietorship is listed as Huntleigh Downs Limited.
Lot 2 Deposited Plan 44495	WN16D/679 (issued in 1976) <ul style="list-style-type: none"> ∴ The current CT concerns 40 ha of land. ∴ The original proprietorship is listed as Huntleigh Downs Limited.
Lot 3 Deposited Plan 44495	WN16D/680 (issued in 1976) <ul style="list-style-type: none"> ∴ The current CT concerns 84.83 ha of land. ∴ The original proprietorship is listed as Huntleigh Downs Limited.
Pukerua 4 North	WN433/251 (issued in 1932) <ul style="list-style-type: none"> ∴ The original proprietorship is listed as Reginald Stage Wall.
Pukerua 4 North	WN44/251 (issued in 1887) <ul style="list-style-type: none"> ∴ The original proprietorship is listed as Alanalin Je Kairange.

6.3 Fire and Emergency New Zealand Records

FENZ records were obtained directly from Fire & Emergency New Zealand, and these are included in Appendix D. FENZ confirmed there was no record of fire incidents or the use of firefighting foams at the site.

6.4 Greater Wellington Regional Council Records

A review of the SLUR database on the GWRC’s Webmap showed no record of HAIL activities at 422 State Highway 1 (Appendix D). The nearest identified contaminated site is Wheua Tapu Cemetery and Crematorium, located approximately 1.03 km west of the site.

6.5 Porirua City Council Records

A Land Information Memorandum (LIM) was requested from Porirua City Council. The Council had no record of the site as a potential contaminated site (Appendix D). The LIM did not contain any evidence of HAIL activities having been conducted on the site.

7.0 Site Reconnaissance and Interviews

A site walkover was undertaken by PDP staff on 10 December 2021. An interview was completed with Mr Dave Riley, a representative of the current site owner, and with the owner of the homestead located in the property at 422A State Highway 1. Photographs are shown in Appendix E.

7.1 Site Observations

The following site observations were made during the site walkover:

- ∴ All of the site buildings and structures which included a residential dwelling, helicopter hangar/shed and helipad, and two farm storage sheds were related to the historical and current land use for sheep farming purposes (Figure 1). The location of the site buildings and structures was consistent with the 2019 aerial image of the site.
- ∴ An above ground storage tank (AST) were located adjacent to the farm storage shed to the north. No details were identified on AST contents or history. This was stored outside on grass, and no signs of spills or leaks were noted.
- ∴ A helicopter hangar was located to the north, with mobile jet fuel storage (Jet A-1 fuel) located on the concrete pad outside the hangar. One barrel of jet fuel was also noted on a trailer. A partially constructed/deconstructed helicopter was seen outside the hangar. There was no access inside the hangar.
- ∴ The shed in the central portion of the site had storage for a range of farming equipment including ATVs, farming machinery, and tractors. Some of these were seen in an old but still functioning state. Storage for a small amount of agri-chemicals for use on farm animals was noted (stored in plastic flagons approx. 1-2L each). No access was granted to the rear of the building due to fencing for animal yards.
- ∴ There were no observed sheep dips or spray structures on the site. No evidence of the potential spray race/concrete pad observed in the aerial images was observed on site (refer to Appendix E).
- ∴ There was no spraying equipment observed on site.
- ∴ There was no asbestos building materials noted in any structure present on site.

7.2 Interviews

An interview was completed with David Riley, a representative of the current site owner, on 10 December 2021, and the following historical information was noted:

- ∴ The site has been used for pastoral purposes.
- ∴ The owner's representative was not aware of any sheep dipping or spray race activities having occurred on the property. The owner's representative suggested the area identified on the aerial image may have been a foundation pad for water storage tanks. The owner noted there is no water reticulation on the site.
- ∴ The owner noted that 422A State Highway 1, along with the properties at 422 & 422B State Highway 1 had been a part of a larger parcel of land, which had been subdivided.

8.0 Information Summary

Based on the findings from this PSI for the site located at 422A State Highway 1, Pukerua Bay, Wellington, the following information on the current and historical land use at the site is summarised:

- ∴ The aerial photographs show that the site was utilized for pastoral purposes from the 1940s until the present day.
- ∴ Two aerial photographs from 1966 and 1973 show an unidentified structure. Given the age of the photograph and pastoral use of the land there is the potential for the structures to have been a spray race, however site walkover indicates this feature is no longer present (refer to Photograph 14 and 15, Appendix E). Communication with the site representative suggests this may have been a former foundation pad for water tank storage.
- ∴ An AST and fuel storage for A-1 Jet Fuel was noted on site. There was no indication of what was stored in the AST.
- ∴ Some minor storage of agrichemicals was noted in a shed on site.
- ∴ During the site walkover there was no evidence of any other HAIL activities observed.
- ∴ No records related to HAIL activities have been recorded by Greater Wellington Regional Council; and none of the documentation on the Porirua City Council LIM indicated that HAIL activities have taken place on the property.

Based upon all of the available information, the only potential sources of soil contamination associated with the past and present land use activities within the site are related to the storage of jet fuel and storage of unknown substances in the AST. There was no evidence found of a sheep dip or spray race on site during the site visit.

9.0 Conceptual Site Model

A risk to human health can only exist if there is a hazard (i.e. a source, for example former pesticide use), a receptor (i.e. people) and an exposure pathway linking the hazard and the receptor (e.g. the ability for a person to come in to contact with a contaminant). An absence of any one of these components means no risk can exist. A conceptual site model (CSM) is designed to identify the hazards/sources, receptors and possible links between these. The conceptual site model developed for the site is provided in Table 3.

Table 3: Conceptual Site Model

Source	Pathway	Receptor	Pathway Linkage
Spill or leak from storage of unknown substances in the AST and jet fuel	Ingestion of soil or home grown produce	Site users	Potentially complete – if a leak was historically present in the AST or jet fuel storage system then this pathway is potentially complete if concentrations are sufficient to result in a risk to human health. No evidence of a leak was noted during the site walkover.
	Dermal contact with soil		
	Inhalation		
	Infiltration to groundwater	Groundwater	Potentially complete – Underlying site soils are inferred to be gravels, sands and mud which may allow movement and entrainment of hydrocarbons and chemicals stored in the AST through the soil profile. The depth to groundwater is unknown and therefore infiltration of jet fuel and substances stored in the AST to the depth of the groundwater table is considered to be a potentially complete pathway until further information is available.
Runoff to surface water	Surface water	Potentially complete – if a historical spill or leak occurred, residue of stored jet fuel or other chemicals could be entrained in surface runoff. However, given the location of the helicopter hangar and AST, there is considered to be a limited migration pathway to the nearest surface water bodies (namely the Kakaho Stream, which is located approximately 120 m and 80 m downgradient of the hangar and AST, respectively).	

10.0 Consideration of the NES

The NES seeks to control activities on contaminated land so as to protect human health. Regulations apply to a ‘piece of land’ which is described as a site or the area of a site where an activity or industry described in the HAIL is currently, or has been, or is more likely than not to have been, undertaken on it.

With regards to the findings from this investigation, one HAIL activity has been identified on site. The identified jet fuel storage at the helicopter hangar and unknown storage in the AST falls under HAIL category A(13) – *Petroleum or petrochemical industries including a petroleum depot, terminal, blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, or bulk storage of petroleum or petrochemicals above or below ground.* This HAIL category will only be applicable at the location of the AST if it has been used for storage of petroleum hydrocarbons or other bulk chemical storage. Therefore, the NES will apply to the subdivision of the site, and possibly to the redevelopment activities (e.g. soil disturbance and disposal) in the vicinity of the helicopter hangar and potentially the AST. Further investigation (a Detailed Site Investigation) will be required to determine if any risk to human health (or environmental receptors) exists from the identified HAIL (or potential HAIL) activities, and what (if any) particular site management measures must be put in place during the proposed site development activities.

Based on the weight of available evidence, it is not considered 'more likely than not' that the area identified in the aerial images has been a sheep dip or spray race feature. However, any excavation undertaken within this area should proceed with caution. If any concrete structures are identified, excavations should be halted until this can be further assessed.

In conclusion, we do not consider any specific planning rules need to be incorporated into the variation for the NGA. If any contamination is found on site in the future, activities can be managed through the NES.

Appendix A: Certifying Statements

I, Nerena Rhodes of Pattle Delamore Partners, certify that:

1. this preliminary site investigation meets the requirements of the Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011 (the NES-CS) because it has been:
 - a. done by a suitably qualified and experienced practitioner, and
 - b. done in accordance with the current edition of *Contaminated land management guidelines No 1 – Reporting on Contaminated Sites in New Zealand*, and
 - c. reported on in accordance with the current edition of *Contaminated land management guidelines No 1 – Reporting on contaminated sites in New Zealand*, and
 - d. the report is certified by a suitably qualified and experienced practitioner.
2. This preliminary site investigation concludes that the activities proposed to occur under regulation 8(4) will need to be undertaken as a controlled activity under regulation 9 of the NES-CS because a HAIL activity has been identified on site.

Evidence of the qualifications and experience of the suitably qualified and experienced practitioner(s) who have done this investigation and certified this report is provided below.

This certification applies to the date of this report.

Signed

Nerena Rhodes

Technical Director – Contaminated Land

Nerena Rhodes – Project Director and Reviewer

Nerena is an environmental scientist with over 16 years of experience in undertaking environmental and contaminated land assessments. She has a BSc in Biology and an MSc in Environmental Science from the University of Auckland. Nerena has experience with undertaking site investigations, environmental assessments, and monitoring programmes across a broad range of media including soil, sediment, surface water and groundwater; and for a wide range of contaminants including heavy metals, PFAS, and asbestos. Nerena has experience in the assessment of data to undertake risk assessments. She has familiarity understanding of the current contaminated land regulation and practice in New Zealand including assessments against the NES-CS; and in the consenting of contaminated sites.

Erin Gasston – Author

Erin is an environmental geologist with 5 years' experience in undertaking environmental and contaminated land assessments. She has a BSc in Geology and an MSc in Geology (1st class hon) from the University of Auckland. Erin has practical experience in a variety of contaminated land assessment techniques and has gained relevant experience in carrying out, leading and reporting on both Preliminary and Detailed Site Investigations.

Overland Flow Paths

Flooding Hazard Maps have identified a natural overland flow path crossing the property. Overland flow paths are natural drainage conveyors or where rainfall has exceeded the capacity of the stormwater network and water will begin to flow over ground and down its natural contour path.

There shall not interruption, impeding or altering in any way the flow of natural drainage ways or land that would convey overland flow paths without the written consent from Porirua City Council. This will be in the form of a submitted design with the application, detailing all proposed works and shall be to the stamped acceptance of Council prior to the start of any works.

REGIONAL CLIMATE CHANGE INFORMATION

Assessment of coastal vulnerability to climate change, sea level rise and natural hazards

For further information please follow the links provided below

Climate Change Mapping undertaken on behalf of the Greater Wellington Regional Council which may be of interest to this property can be found at the following link:

<https://mapping1.gw.govt.nz/GW/SLR/#background-to-topic>

That webpage displays a dynamic map which shows the calculated inundation areas at a range of sea level rise values in the Wellington Region, it does not make a prediction as to actual sea level rise. Alternative map overlays show modelled storm surge flooding at different sea level rise values, for a 100-year event. Inundation areas were modelled in 2017 based off a detailed digital elevation model of the Wellington region. Tide level offsets are based on values in a report produced by NIWA for the Parliamentary Commissioner for the Environment in 2016. An assessment of coastal vulnerability to climate change, sea level rise and natural hazards titled 'Preparing Coastal Communities for Climate Change' has also been prepared. That report was commissioned to assist councils in the Wellington region in designing a process for working with the affected communities to develop long-term adaptive strategies. That report may be of interest in relation to this property. A link to that report can be found here:

<http://www.gw.govt.nz/assets/Uploads/Wellington-Regional-Coastal-Vulnerability-AssessmentJune-2019Final.pdf>

Information Request –422 SH1, Pukerua Bay

I refer to your official information request dated 2 December 2021 asking for the following information:

...any information you have relating to any fire incidents and the use of firefighting foams at 422 State Highway 1, Pukerua Bay (Porirua) Lot 2 DP 534864

Your request has been considered in accordance with the provisions of the Official Information Act 1982. Fire and Emergency New Zealand holds no records of any fire incidents or the use of firefighting foams at this site. Consequently, your request is declined under section 18(e) of the Official Information Act, as the information you requested does not exist. Please note, Fire and Emergency's searchable incident database dates back to 1986.

You have the right to seek an investigation and review by the Ombudsman of this decision. Information about how to make a complaint is available at www.ombudsman.parliament.nz or freephone 0800 802 602.

Kia ora Jess

Thank you for your enquiry below. Please use the SLUR email address for enquiries as this inbox is administered with priority.

I can confirm that the property you identified with the legal descriptions below is not included in the Selected Land Use Register (SLUR).

I note that the property is rural and appears to be, or has been, productive farmland. Pastoral farming is not specifically included on the HAIL (2011) and is not included in the SLUR. The HAIL includes typical farming activities of horticulture, sheep dipping and bulk chemical and fuel storage. These activities are more difficult to identify and may not be as well represented on the SLUR.

RE: [EXTERNAL] Contamination Information request

Jaclyn Williams <[REDACTED]>

To Jess Campbell

Tue 22/07/2025 4:43 pm

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hello Jess,

Porirua City Council does not have any records of the site containing contaminated land or having previously or currently being used for activities listed in the Hazardous Activities and Industries List (HAIL).

Please note that Greater Wellington Regional Council is the responsible party for registering HAIL or contaminated sites on the Selected Land Use Register (SLUR).

You can read more about the Selected Land Use Register here: <https://www.gw.govt.nz/environment/land-use/contaminated-land-slur/>

Kind regards,

Jaclyn Williams
